OBJECTIVE TYPE QUESTIONS

UNIT -1

SUBJECT: REFRIGERATION AND AIR CONDITIONING

UNIT-I: AIR REFRIGERATION

- 1. Reversed Carnot cycle comprises
- A) Two isentropic processes and two adiabatic processes
- B) Two isentropic processes and two isothermal processes
- C) Two isentropic processes and two isobaric processes
- D) Two isentropic processes and two isochoric processes
- 2. Two Carnot Refrigerators are employed, one for ice making and other for comfort cooling
- A) The COP of the refrigerator for ice making is higher than that for other
- B) The COP of the refrigerator for ice making is same as that for the other
- C) The COP of the refrigerator for ice making is lower than that for other
- D) The COP of Carnot refrigerator will depend on refrigerant used
- 3. A reversed Carnot cycle has a COP of 4. The ratio of higher temperature to lower temperature will be
- A) 1.25 B) 1.5 C) 2 D) 2.5
- 4. Carnot refrigerator absorbs heat at -13° C and requires 1 kW for each 6.5 kW of heat absorbed, the COP and temperature of heat rejections respectively
- A) COP = 6.5, $t = 27^{\circ} C B$) COP = 7.5, $t = 27^{\circ} C$
- C) COP = 6.5, $t = 30^{\circ} CD$) COP = 7.5, $t = 37^{\circ} C$
- 5. The dense air refrigeration system as compared to open air refrigeration system for same Range of temperatures using Bell- Coleman cycle requires.
- A) Same power/Ton of Refrigeration
- B) Lower power/Ton of Refrigeration
- C) Higher power/Ton of Refrigeration
- D) Unpredictable Results.
- 6. For very high speed planes cruising at Mach number 2.5 and above, the air craft refrigeration system recommended is
- A) Simple evaporative type
- B) Boot-strap type

C) Regenerative type

- D) Boot strap evaporative type
- 7. The air craft system giving Lowest Dry Air Rated Turbine discharge temperature at supersonic cruising speeds of the plane, is
- A) Reduced ambient system of Refrigeration
- B) Boot-strap system of Refrigeration
- C) Regenerative system of Refrigeration
- D) Boot strap evaporative system of

- Refrigeration
- 8. There are two cooling turbines in
- A) Reduced ambient system of Refrigeration
- B) Boot-strap system of Refrigeration
- C) Regenerative system of Refrigeration Refrigeration
- D) Boot strap evaporative system of
- 9. There are two stages of compression of air in
- A) Reduced ambient system of Refrigeration
- B) Boot-strap system of Refrigeration
- C) Regenerative system of Refrigeration
- D) Simple evaporative system of Refrigeration
- 10. The amount of heat absorbed by the system at low temperature is
- A) COP

- B) refrigerating effect
- C) Work done on the system
- D) refrigeration efficiency
- 11. No refrigerator using reversed Carnot cycle has been constructed because

- A) It is less efficient B) It is uneconomical
- C) Isentropic portions of cycle require low speeds where as isothermal portions require high speeds
- D) Isentropic portions of cycle require high speeds where as isothermal portions require low speeds
- 12. A refrigeration cycle is usually a
- A) open cycle
- B) closed cycle
- C) mixed cycle
- D) Hybrid cycle
- 13. Co-efficient of performance of a Reversed Carnot cycle refrigerator working between higher temperature T2 and lower temperature T1
- A) will increase with increase in T1 keeping T2 fixed B) will decrease with increase in T1 keeping T2 fixed
- C) will first increase with increase in T1 and then decrease with increase T1 keeping T2fixed
- D) None of the above
- 14.Bell-Colemann cycle comprises
- A) two isentropic processes and two adiabatic processes
- B) two isentropic processes and two isothermal processes
- C) two isentropic processes and two isobaric processes
- D) two isentropic processes and two isochoric processes
- 15. Two Carnot Refrigerators are employed, one for ice making and other for comfort cooling
- A) The COP of the refrigerator for ice making is higher than that for other
- B) The COP of the refrigerator for ice making is same as that for the other
- C) The COP of the refrigerator for ice making is lower than that for other
- D) The COP of Carnot refrigerator will depend on refrigerant used
- 16. The COP of Carnot Refrigerator is 3 and it produces 1 TR. The work that will be done is equal to
- A) 70 kJ/min B) 100 kJ/min C) 200 kJ/min D) 210 kJ/min
- 17. Carnot refrigerator absorbs heat at -13° C and requires 1 kW for each 6.5 kW of heat absorbed, the COP and temperature of heat rejections respectively
- A) COP = 6.5, $t = 27^{\circ} C B$) COP = 7.5, $t = 27^{\circ} C$
- C) COP = 6.5, $t = 30^{\circ} CD$) COP = 7.5, $t = 37^{\circ} C$
- 18. In Bell Colemann refrigerator for the same temperature range
- A) COP of dense air system is equal to COP of open air system
- B) COP of dense air system is lower than COP of open air system
- C) COP of dense air system is higher than COP of open air system
- D) COP of dense air system may be higher or lower than COP of open air system depending upon pressure ratio.
- 19. For very high speed planes cruising at Mach number 2.5 and above, the air craft refrigeration system recommended is
- A) Simple evaporative type
- B) Boot-strap type
- C) Regenerative type
- D) Boot strap evaporative type
- 20. The air craft system giving Lowest Dry Air Rated Turbine discharge temperature at supersonic cruising speeds of the plane, is
- A) Reduced ambient system of Refrigeration
- B) Boot-strap system of Refrigeration
- C) Regenerative system of Refrigeration
- D) Boot strap evaporative system of Refrigeration
- 21. There are two cooling turbines in
- A) Reduced ambient system of Refrigeration
- B) Boot-strap system of Refrigeration

C) Regenerative system of Refrigeration	D) Boot strap evaporative system of
Refrigeration 22. There are two stages of compression of air i	
A) Reduced ambient system of Refrigeration	B) Boot-strap system of Refrigeration
C) Regenerative system of Refrigeration	D) Simple evaporative system of Refrigeration
23. A Bell-Colemann cycle is	D) Simple evaporative system of Kerrigeration
A) Reversed Carnot Cycle B) Reversed Joule	Cycle
C) Reversed Rankine cycle D) None of the ab	•
24. In a refrigeration cycle the heat is rejected b	
	,8
A) expansion valve B) compressor	
C) condenser D) all the above	
25. A refrigeration cycle is usually a	D) II 1 : 1
A) open cycle B) closed cycle C) mixed cycle	
26. A reversible refrigerator working between to	*
A) has the same COP whatever the working sul	
B) has its COP increased for working substance	
C) has its COP increased for working substance	e with higher specific heats
D) none of the above	
27. 1.0 Ton of Refrigeration is equal to A) 50 kcal/min B) 50 kcal/hr C) 80 kcal	al/min D) 80 kcal/hr
A) 50 kcal/min B) 50 kcal/hr C) 80 kca 28. Which of the following cycles uses 'air' as t	*
_ ,	Bell Coleman
29. In a reversed Brayton cycle, the heat absorp	
A) Isentropic compression process B) Const	_
	ant pressure expansion process
30. Air refrigeration cycle is used in	ant pressure expansion process
A) Domestic refrigerators B) Commercial i	refrigerators
C) Gas liquefaction D) Air condition	•
-, 1	6
	PRESSION REFRIGERATION
1. Heat is absorbed by the refrigerant, during va	
A) Compressor B) Condenser C) Evapor	*
2. In a simple saturated vapor compression cycle	
A) before entering compressor B) before enter	_
C) before entering throttle valve D) before entering	
	erant in vapour compression refrigeration system
A) after compression B) before compre	ssion C) before Throttling D) none
of the above	
4. The order in which main components of vapor	
A) compressor-evaporator-condenser-throttle v	
B) compressor-condenser-evaporator-throttle v	
C) compressor-throttle valve- evaporator-conde	
D) compressor-condenser- throttle valve- evapor	
5. The oil separator is incorporated in vapour co	
A) between evaporator and compressor B)	•
C) between condenser and Throttle valve D)	•
6. In vapour compression refrigeration cycle the	_
meat rejected in condenser = 63 KW, Work don	e in compressor = 10 kw, then COP(refrigerator) is

7. Following results are tabulated for vapour compression refrigeration cycle. Einthalpy at suction – 190 kJ/kg. Enthalpy at desit from condenser – 80 kJ/kg. COP of cycle would be A) 3.5 B) 4.5 C) 5.5 D) 6.5 8. For simple saturated vapour compression refrigeration cycle operating between5°C and 40°C, and the refrigerants being R-11, R-12, R-717 and R-22, the evaporator pressure is lowest for A) R-11 B) R-12 C) R-717 D) R-22 9. For simple saturated vapour compression refrigeration cycle operating between5°C and 40°C, and the refrigerants being R-11, R-12, R-717 and R-22, the compressor displacement per min per ton of refrigeration is highest for A) R-11 B) R-12 C) R-717 D) R-22 10. With reciprocating compressor in vapour compression refrigeration system, wet compression is not desirable because A) Liquid trapped up in the head of cylinder may damage the compressor valves B) COP of the cycle decreases C) Volumetric efficiency of compressor decreases D) Mass flow rate per ton of refrigerant increases 11. An ideal refrigerant should have A) low latent heat of vaporization B) high critical temperature C) high boiling point D) high specific volume of vapour 12. The refrigerant leaving throttle valve is A) saturated liquid B) saturated vapour C) superheated vapour D) fraction as saturated vapour and remainder as liquid 13. Freon group of refrigerants A) Toxic B) inflammable C) non-toxic and non-inflammable D) Highly toxic and inflammable C) non-toxic and non-inflammable D) Highly toxic and inflammable C) Osopa mater test D) any of the above C) Soap and water test D) any of the above (e) none of the above 15. During compression in a vapour compression cycle the refrigerant is in superheated condition A) before entering compression in a vapour compression cycle, the refrigerant is in superheated condition A) before entering compressor B) before entering compression refrigeration system A) after compression b) before compression cycle, the refrigerant is in superheated condition A) before entering throttle valve D) befo	A) 4.5 B) 5.5 C) 6.5 D) not possible to find with the given data
80 kJ/kg, COP of cycle would be A) 3.5 B) 4.5 C) 5.5 D) 6.5 8. For simple saturated vapour compression refrigeration cycle operating between5°C and 40°C, and the refrigerants being R-11, R-12, R-717 and R-22, the evaporator pressure is lowest for A) R-11 B) R-12 C) R-717 D) R-22 9. For simple saturated vapour compression refrigeration cycle operating between5°C and 40°C, and the refrigeration is highest for A) R-11 B) R-12 C) R-717 D) R-22 10. With reciprocating compressor in vapour compression refrigeration system, wet compression is not desirable because A) Liquid trapped up in the head of cylinder may damage the compressor valves B) COP of the cycle decreases C) Volumetric efficiency of compressor decreases D) Mass flow rate per ton of refrigerant increases 11. An ideal refrigerant should have A) low latent heat of vaporization B) high critical temperature C) high boiling point D) fraction as saturated vapour and remainder as liquid 13. Freon group of refrigerants A) Toxic B) inflammable C) non-toxic and non-inflammable D) Highly toxic and inflammable 14. The leaks of refrigerant from a cycle may be detected by A) Ifalide torch test B) Sulphur candle test C) Soap and water test D) any of the above (e) none of the above 15. During compression in a vapour compression cycle the refrigerant is superheated A) work done is nectuced D) Refrigeranting effect is reduced 16. Heat is rejected by the refrigerant, during vapor compression refrigeration cycle in A) Compressor B) Condenser C) Evaporator D) Throttle valve 17. In a simple saturated vapour compression cycle, the refrigerant is in superheated condition A) before entering compressor C) before entering compressor refrigeration efficient is in superheated condition A) before entering throttle valve D) before entering compression refrigeration cycle means A) Vapour compression in wet region, but leaves in superheated region D) None of the above 20. The oil separator is incorporated in vapour compression refrigeration system	7. Following results are tabulated for vapour compression refrigeration cycle. Enthalpy at suction =
A) 3.5 B) 4.5 C) 5.5 D) 6.5 8. For simple saturated vapour compression refrigeration cycle operating between5°C and 40°C, and the refrigerants being R-11, R-12, R-717 and R-22, the evaporator pressure is lowest for A) R-11 B) R-12 C) R-717 D) R-22 9. For simple saturated vapour compression refrigeration cycle operating between5°C and 40°C, and the refrigerants being R-11, R-12, R-717 and R-22, the compressor displacement per min per ton of refrigeration is highest for A) R-11 B) R-12 C) R-717 D) R-22 10. With reciprocating compressor in vapour compression refrigeration system, wet compression is not desirable because A) Liquid trapped up in the head of cylinder may damage the compressor valves B) COP of the cycle decreases C) Volumetric efficiency of compressor decreases D) Mass flow rate per ton of refrigerant increases 11. An ideal refrigerant should have A) Iow latent heat of vaporization B) high critical temperature C) high boiling point D) high specific volume of vapour 12. The refrigerant leaving throttle valve is A) saturated liquid B) saturated vapour C) superheated vapour D) fraction as saturated vapour and remainder as liquid 13. Freon group of refrigerants A) Toxic B) inflammable C) non-toxic and non-inflammable 14. The leaks of refrigerant from a cycle may be detected by A) Halide torch test B) Sulphur candle test C) Soap and water test D) any of the above (e) none of the above 15. During compression in a vapour compression cycle the refrigerant is superheated A) work done is increased B) C.O.P is increased C) Work done is reduced D) Refrigerating vapour compression refrigeration cycle in A) Compressor B) Condenser C) Evaporator D) Throttle valve 15. During compression in a vapour compression cycle, the refrigerant is superheated condition A) before entering compressor B) before entering condenser C) Evaporator D) Throttle valve 17. In a simple saturated vapour compression cycle, the refrigerant is in superheated condition A) before entering throttle valve D)	190 kJ/kg, Enthalpy at discharge from compressor = 210 kJ/kg, Enthalpy at exit from condenser =
8. For simple saturated vapour compression refrigeration cycle operating between5°C and 40°C, and the refrigerants being R-11, R-12, R-717 and R-22, the evaporator pressure is lowest for A) R-11 B) R-12 C) R-717 D) R-22 9. For simple saturated vapour compression refrigeration cycle operating between5°C and 40°C, and the refrigerants being R-11, R-12, R-717 and R-22, the compressor displacement per min per ton of refrigerants being R-11, R-12, R-717 D) R-22 10. With reciprocating compressor in vapour compression refrigeration system, wet compression is not desirable because A) Liquid trapped up in the head of cylinder may damage the compressor valves B) COP of the cycle decreases C) Volumetric efficiency of compressor decreases D) Mass flow rate per ton of refrigerant increases 11. An ideal refrigerant should have A) low latent heat of vaporization B) high critical temperature C) high boiling point D) high specific volume of vapour 12. The refrigerant leaving throttle valve is A) saturated liquid B) saturated vapour C) superheated vapour D) fraction as saturated vapour and remainder as liquid 13. Freon group of refrigerants A) Toxic B) inflammable C) non-toxic and non-inflammable D) Highly toxic and inflammable 14. The leaks of refrigerant from a cycle may be detected by A) Halide torch test B) Sulphur candle test C) Soap and water test D) any of the above (e) none of the above 15. During compression in a vapour compression cycle the refrigerant is superheated A) work done is increased B) C.O.P is increased C) Work done is reduced D) Refrigerant, during vapor compression refrigeration cycle in A) Compressor B) Condenser C) Evaporator D) Throttle valve C) before entering compressor B) before entering condenser C) before entering compression refrigeration system A) after compression b) before compression cycle, the refrigerant is in superheated condition A) before entering throttle valve D) before entering vaporator B) before entering rondenser C) before entering compression refrigerat	80 kJ/kg, COP of cycle would be
and the refrigerants being R-11, R-12, R-717 and R-22, the evaporator pressure is lowest for A) R-11 B) R-12 C) R-717 D) R-22 9. For simple saturated vapour compression refrigeration cycle operating between5°C and 40°C, and the refrigerants being R-11, R-12, R-717 and R-22, the compressor displacement per min per ton of refrigeration is highest for A) R-11 B) R-12 C) R-717 D) R-22 10. With reciprocating compressor in vapour compression refrigeration system, wet compression is not desirable because A) Liquid trapped up in the head of cylinder may damage the compressor valves B) COP of the cycle decreases C) Volumetric efficiency of compressor decreases D) Mass flow rate per ton of refrigerant increases 11. An ideal refrigerant should have A) low latent heat of vaporization B) high critical temperature C) high boiling point D) high specific volume of vapour 12. The refrigerant leaving throttle valve is A) saturated liquid B) saturated vapour C) superheated vapour D) fraction as saturated vapour and remainder as liquid 13. Freon group of refrigerants A) Toxic B) inflammable C) non-toxic and non-inflammable D) Highly toxic and inflammable E) Highly toxic and inflammable C) non-toxic and non-inflammable D) Highly coxic and inflammable D) Juning compression in a vapour compression cycle the refrigerant is superheated A) work done is increased B) C.O.P is increased C) Work done is reduced D) Refrigerating effect is reduced 16. Heat is rejected by the refrigerant, during vapor compression refrigeration cycle in A) Compressor B) Condenser C D Evaporator D) Throttle valve 17. In a simple saturated vapour compression cycle, the refrigerant is in superheated condition A) before entering compressor B) before compression refrigerant in vapour compression refrigeration system A) after compression b) before compression refrigerant in vapour compression refrigeration system A) after compression in two region, but leaves in superheated region B) Vapour compression in wet region, but leaves in superhea	A) 3.5 B) 4.5 C) 5.5 D) 6.5
and the refrigerants being R-11, R-12, R-717 and R-22, the evaporator pressure is lowest for A) R-11 B) R-12 C) R-717 D) R-22 9. For simple saturated vapour compression refrigeration cycle operating between5°C and 40°C, and the refrigerants being R-11, R-12, R-717 and R-22, the compressor displacement per min per ton of refrigeration is highest for A) R-11 B) R-12 C) R-717 D) R-22 10. With reciprocating compressor in vapour compression refrigeration system, wet compression is not desirable because A) Liquid trapped up in the head of cylinder may damage the compressor valves B) COP of the cycle decreases C) Volumetric efficiency of compressor decreases D) Mass flow rate per ton of refrigerant increases 11. An ideal refrigerant should have A) low latent heat of vaporization B) high critical temperature C) high boiling point D) high specific volume of vapour 12. The refrigerant leaving throttle valve is A) saturated liquid B) saturated vapour C) superheated vapour D) fraction as saturated vapour and remainder as liquid 13. Freon group of refrigerants A) Toxic B) inflammable C) non-toxic and non-inflammable D) Highly toxic and inflammable E) Highly toxic and inflammable C) non-toxic and non-inflammable D) Highly coxic and inflammable D) Juning compression in a vapour compression cycle the refrigerant is superheated A) work done is increased B) C.O.P is increased C) Work done is reduced D) Refrigerating effect is reduced 16. Heat is rejected by the refrigerant, during vapor compression refrigeration cycle in A) Compressor B) Condenser C D Evaporator D) Throttle valve 17. In a simple saturated vapour compression cycle, the refrigerant is in superheated condition A) before entering compressor B) before compression refrigerant in vapour compression refrigeration system A) after compression b) before compression refrigerant in vapour compression refrigeration system A) after compression in two region, but evaporation in wet region B) Vapour compression in wet region, but leaves in superheated	
A) R-11 B) R-12 C) R-717 D) R-22 9. For simple saturated vapour compression refrigeration cycle operating between5°C and 40°C, and the refrigerants being R-11, R-12, R-717 and R-22, the compressor displacement per min per ton of refrigeration is highest for A) R-11 B) R-12 C) R-717 D) R-22 10. With reciprocating compressor in vapour compression refrigeration system, wet compression is not desirable because A) Liquid trapped up in the head of cylinder may damage the compressor valves B) COP of the cycle decreases C) Volumetric efficiency of compressor decreases D) Mass flow rate per ton of refrigerant increases 11. An ideal refrigerant should have A) low latent heat of vaporization B) high critical temperature C) high boiling point D) high specific volume of vapour 12. The refrigerant leaving throttle valve is A) saturated liquid B) saturated vapour C) superheated vapour D) fraction as saturated vapour and remainder as liquid 13. Freon group of refrigerants A) Toxic B) inflammable C) non-toxic and non-inflammable 14. The leaks of refrigerant from a cycle may be detected by A) Halide torch test B) Sulphur candle test C) Soap and water test D) any of the above (e) none of the above 15. During compression in a vapour compression cycle the refrigerant is superheated A) work done is increased B) C.O.P is increased C) Work done is reduced D) Refrigeranting effect is reduced 16. Heat is rejected by the refrigerant, during vapor compression refrigeration cycle in A) Compressor B) Condenser C) Evaporator D) Throttle valve 17. In a simple saturated vapour compression cycle, the refrigerant is in superheated condition A) before entering compressor B) before compression refrigeration cycle in A) Compressor B) Defore compression refrigeration in vapour compression refrigeration cycle means A) Vapour compression have region, but evaporation in wet region B) Vapour compression in wet region, but evaporation in wet region D) None of the above 20. The oil separator is incorporated in vapour compres	8. For simple saturated vapour compression refrigeration cycle operating between 5°C and 40°C,
9. For simple saturated vapour compression refrigeration cycle operating between5°C and 40°C, and the refrigerants being R-11, R-12, R-717 and R-22, the compressor displacement per min per ton of refrigeration is highest for A) R-11 B) R-12 C) R-717 D) R-22 10. With reciprocating compressor in vapour compression refrigeration system, wet compression is not desirable because A) Liquid trapped up in the head of cylinder may damage the compressor valves B) COP of the cycle decreases C) Volumetric efficiency of compressor decreases D) Mass flow rate per ton of refrigerant increases 11. An ideal refrigerant should have A) low latent heat of vaporization B) high critical temperature C) high boiling point D) high specific volume of vapour 12. The refrigerant leaving throttle valve is A) saturated liquid B) saturated vapour C) superheated vapour D) fraction as saturated vapour and remainder as liquid 13. Freon group of refrigerants A) Toxic B) inflammable C) non-toxic and non-inflammable D) Highly toxic and inflammable C) non-toxic and non-inflammable 14. The leaks of refrigerant from a cycle may be detected by A) Halide torch test B) Sulphur candle test C) Soap and water test D) any of the above C) Work done is increased B) C.O.P is increased C) Work done is increased B) C.O.P is increased C) Work done is reduced D) Refrigerant, during vapor compression refrigeration cycle in A) Compressor B) Condenser C) Evaporator D) Throttle valve 17. In a simple saturated vapour compression cycle, the refrigerant is in superheated condition A) before entering compressor B) before entering compressor C) before entering compressor D) before entering compressor C) before entering compression takes place in wet region D) none of the above	and the refrigerants being R-11, R-12, R-717 and R-22, the evaporator pressure is lowest for
and the refrigerants being R-11, R-12, R-717 and R-22, the compressor displacement per min per ton of refrigeration is highest for A) R-11 B) R-12 C) R-717 D) R-22 10. With reciprocating compressor in vapour compression refrigeration system, wet compression is not desirable because A) Liquid trapped up in the head of cylinder may damage the compressor valves B) COP of the cycle decreases C) Volumetric efficiency of compressor decreases D) Mass flow rate per ton of refrigerant increases 11. An ideal refrigerant should have A) low latent heat of vaporization B) high critical temperature C) high boiling point D) high specific volume of vapour 12. The refrigerant leaving throttle valve is A) saturated liquid B) saturated vapour C) superheated vapour D) fraction as saturated vapour and remainder as liquid 13. Freon group of refrigerants A) Toxic B) inflammable C) non-toxic and non-inflammable D) Highly toxic and inflammable 14. The leaks of refrigerant from a cycle may be detected by A) Halide torch test B) Sulphur candle test C) Soap and water test D) any of the above 15. During compression in a vapour compression cycle the refrigerant is superheated A) work done is increased B) C.O.P is increased C) Work done is increased B) C.O.P is increased C) Work done is reduced D) Refrigerating effect is reduced 16. Heat is rejected by the refrigerant, during vapor compression refrigeration cycle in A) Compressor B) Condenser C) Evaporator D) Throttle valve 17. In a simple saturated vapour compression cycle, the refrigerant is superheated condition A) before entering throttle valve D) before entering condenser C) before entering compressor B) before entering compressor B) before compression refrigeration cycle means A) Vapour compression takes place in wet region B) Vapour compression in wet region, but evaporation in wet region D) None of the above 20. The oil separator is incorporated in vapour compression refrigeration system	A) R-11 B) R-12 C) R-717 D) R-22
ton of refrigeration is highest for A) R-11 B) R-12 C) R-717 D) R-22 10. With reciprocating compressor in vapour compression refrigeration system, wet compression is not desirable because A) Liquid trapped up in the head of cylinder may damage the compressor valves B) COP of the cycle decreases C) Volumetric efficiency of compressor decreases D) Mass flow rate per ton of refrigerant increases 11. An ideal refrigerant should have A) low latent heat of vaporization B) high critical temperature C) high boiling point D) high specific volume of vapour 12. The refrigerant leaving throttle valve is A) saturated liquid B) saturated vapour C) superheated vapour D) fraction as saturated vapour and remainder as liquid 13. Freon group of refrigerants A) Toxic B) inflammable C) non-toxic and non-inflammable D) Highly toxic and inflammable E) Highly toxic and inflammable H. The leaks of refrigerant from a cycle may be detected by A) Halide torch test B) Sulphur candle test C) Soap and water test D) any of the above (e) none of the above 15. During compression in a vapour compression cycle the refrigerant is superheated A) work done is increased B) C.O.P is increased C) Work done is reduced D) Refrigerating effect is reduced 16. Heat is rejected by the refrigerant, during vapor compression refrigeration cycle in A) Compressor B) Condenser C) Evaporator D) Throttle valve 17. In a simple saturated vapour compression cycle, the refrigerant is in superheated condition A) before entering compressor B) before entering evaporator 18. Sub-cooling is a process of cooling the refrigerant in vapour compression refrigeration system A) after compression B) before compression C) before Throttling D) none of the above 19. Wet compression takes place in wet region B) Vapour compression in dry region, but evaporation in wet region C) vapour compression in wet region, but leaves in superheated region D) None of the above 20. The oil separator is incorporated in vapour compression refrigeration system	9. For simple saturated vapour compression refrigeration cycle operating between 5°C and 40°C,
A) R-11 B) R-12 C) R-717 D) R-22 10. With reciprocating compressor in vapour compression refrigeration system, wet compression is not desirable because A) Liquid trapped up in the head of cylinder may damage the compressor valves B) COP of the cycle decreases C) Volumetric efficiency of compressor decreases D) Mass flow rate per ton of refrigerant increases 11. An ideal refrigerant should have A) low latent heat of vaporization B) high critical temperature C) high boiling point D) high specific volume of vapour 12. The refrigerant leaving throttle valve is A) saturated liquid B) saturated vapour C) superheated vapour D) fraction as saturated vapour and remainder as liquid 13. Freon group of refrigerants A) Toxic B) inflammable C) non-toxic and non-inflammable D) Highly toxic and inflammable H. The leaks of refrigerant from a cycle may be detected by A) Halide torch test B) Sulphur candle test C) Soap and water test D) any of the above (e) none of the above 15. During compression in a vapour compression cycle the refrigerant is superheated A) work done is increased B) C.O.P is increased C) Work done is reduced D) Refrigerating effect is reduced 16. Heat is rejected by the refrigerant, during vapor compression refrigeration cycle in A) Compressor B) Condenser C) Evaporator D) Throttle valve 17. In a simple saturated vapour compression cycle, the refrigerant is in superheated condition A) before entering compressor B) before entering evaporator 18. Sub-cooling is a process of cooling the refrigerant in vapour compression refrigeration system A) after compression B) before compression C) before Throttling D) none of the above 19. Wet compression takes place in wet region B) Vapour compression in wet region, but evaporation in wet region D) None of the above 20. The oil separator is incorporated in vapour compression refrigeration system	and the refrigerants being R-11, R-12, R-717 and R-22, the compressor displacement per min per
10. With reciprocating compressor in vapour compression refrigeration system, wet compression is not desirable because A) Liquid trapped up in the head of cylinder may damage the compressor valves B) COP of the cycle decreases C) Volumetric efficiency of compressor decreases D) Mass flow rate per ton of refrigerant increases 11. An ideal refrigerant should have A) low latent heat of vaporization B) high critical temperature C) high boiling point D) high specific volume of vapour 12. The refrigerant leaving throttle valve is A) saturated liquid B) saturated vapour C) superheated vapour D) fraction as saturated vapour and remainder as liquid 13. Freon group of refrigerants A) Toxic B) inflammable C) non-toxic and non-inflammable D) Highly toxic and inflammable 14. The leaks of refrigerant from a cycle may be detected by A) Halide torch test B) Sulphur candle test C) Soap and water test D) any of the above (e) none of the above 15. During compression in a vapour compression cycle the refrigerant is superheated A) work done is increased B) C.O.P is increased C) Work done is reduced D) Refrigerating effect is reduced 16. Heat is rejected by the refrigerant, during vapor compression refrigeration cycle in A) Compressor B) Condenser C) Evaporator D) Throttle valve 17. In a simple saturated vapour compression cycle, the refrigerant is in superheated condition A) before entering compressor B) before entering evaporator 18. Sub-cooling is a process of cooling the refrigerant in vapour compression refrigeration system A) after compression B) before compression refrigeration cycle means A) Vapour compression in dry region, but leaves in superheated region D) None of the above 20. The oil separator is incorporated in vapour compression refrigeration system	ton of refrigeration is highest for
not desirable because A) Liquid trapped up in the head of cylinder may damage the compressor valves B) COP of the cycle decreases C) Volumetric efficiency of compressor decreases D) Mass flow rate per ton of refrigerant increases 11. An ideal refrigerant should have A) low latent heat of vaporization B) high critical temperature C) high boiling point D) high specific volume of vapour 12. The refrigerant leaving throttle valve is A) saturated liquid B) saturated vapour C) superheated vapour D) fraction as saturated vapour and remainder as liquid 13. Freon group of refrigerants A) Toxic B) inflammable C) non-toxic and non-inflammable D) Highly toxic and inflammable 14. The leaks of refrigerant from a cycle may be detected by A) Halide torch test B) Sulphur candle test C) Soap and water test D) any of the above (e) none of the above 15. During compression in a vapour compression cycle the refrigerant is superheated A) work done is increased B) C.O.P is increased C) Work done is reduced D) Refrigerating effect is reduced 16. Heat is rejected by the refrigerant, during vapor compression refrigeration cycle in A) Compressor B) Condenser C) Evaporator D) Throttle valve 17. In a simple saturated vapour compression cycle, the refrigerant is in superheated condition A) before entering compressor B) before entering condenser C) before entering compressor B) before entering evaporator 18. Sub-cooling is a process of cooling the refrigerant in vapour compression refrigeration system A) after compression B) before compression refrigeration cycle means A) Vapour compression takes place in wet region D) Vapour compression in dry region, but leaves in superheated region D) None of the above 20. The oil separator is incorporated in vapour compression refrigeration system	A) R-11 B) R-12 C) R-717 D) R-22
A) Liquid trapped up in the head of cylinder may damage the compressor valves B) COP of the cycle decreases C) Volumetric efficiency of compressor decreases D) Mass flow rate per ton of refrigerant increases 11. An ideal refrigerant should have A) low latent heat of vaporization B) high critical temperature C) high boiling point D) high specific volume of vapour 12. The refrigerant leaving throttle valve is A) saturated liquid B) saturated vapour C) superheated vapour D) fraction as saturated vapour and remainder as liquid 13. Freon group of refrigerants A) Toxic B) inflammable C) non-toxic and non-inflammable D) Highly toxic and inflammable 14. The leaks of refrigerant from a cycle may be detected by A) Halide torch test B) Sulphur candle test C) Soap and water test D) any of the above (e) none of the above 15. During compression in a vapour compression cycle the refrigerant is superheated A) work done is increased B) C.O.P is increased C) Work done is reduced D) Refrigerating effect is reduced 16. Heat is rejected by the refrigerant, during vapor compression refrigeration cycle in A) Compressor B) Condenser C) Evaporator D) Throttle valve 17. In a simple saturated vapour compression cycle, the refrigerant is in superheated condition A) before entering compressor B) before entering condenser C) before entering throttle valve D) before entering evaporator 18. Sub-cooling is a process of cooling the refrigerant in vapour compression refrigeration system A) after compression B) before compression refrigeration cycle means A) Vapour compression takes place in wet region B) Vapour compression in dry region, but leaves in superheated region D) None of the above 20. The oil separator is incorporated in vapour compression refrigeration system	10. With reciprocating compressor in vapour compression refrigeration system, wet compression is
B) COP of the cycle decreases C) Volumetric efficiency of compressor decreases D) Mass flow rate per ton of refrigerant increases 11. An ideal refrigerant should have A) low latent heat of vaporization B) high critical temperature C) high boiling point D) high specific volume of vapour 12. The refrigerant leaving throttle valve is A) saturated liquid B) saturated vapour C) superheated vapour D) fraction as saturated vapour and remainder as liquid 13. Freon group of refrigerants A) Toxic B) inflammable C) non-toxic and non-inflammable D) Highly toxic and inflammable 14. The leaks of refrigerant from a cycle may be detected by A) Halide torch test B) Sulphur candle test C) Soap and water test D) any of the above (e) none of the above 15. During compression in a vapour compression cycle the refrigerant is superheated A) work done is increased B) C.O.P is increased C) Work done is reduced D) Refrigerating effect is reduced 16. Heat is rejected by the refrigerant, during vapor compression refrigeration cycle in A) Compressor B) Condenser C) Evaporator D) Throttle valve 17. In a simple saturated vapour compression cycle, the refrigerant is in superheated condition A) before entering compressor B) before entering condenser C) before entering throttle valve D) before entering evaporator 18. Sub-cooling is a process of cooling the refrigerant in vapour compression refrigeration system A) after compression B) before compression C) before Throttling D) none of the above 19. Wet compression takes place in wet region B) Vapour compression in dry region, but leaves in superheated region D) None of the above 20. The oil separator is incorporated in vapour compression refrigeration system	not desirable because
C) Volumetric efficiency of compressor decreases D) Mass flow rate per ton of refrigerant increases 11. An ideal refrigerant should have A) low latent heat of vaporization B) high critical temperature C) high boiling point D) high specific volume of vapour 12. The refrigerant leaving throttle valve is A) saturated liquid B) saturated vapour C) superheated vapour D) fraction as saturated vapour and remainder as liquid 13. Freon group of refrigerants A) Toxic B) inflammable C) non-toxic and non-inflammable D) Highly toxic and inflammable 14. The leaks of refrigerant from a cycle may be detected by A) Halide torch test B) Sulphur candle test C) Soap and water test D) any of the above (e) none of the above 15. During compression in a vapour compression cycle the refrigerant is superheated A) work done is increased B) C.O.P is increased C) Work done is reduced D) Refrigerating effect is reduced 16. Heat is rejected by the refrigerant, during vapor compression refrigeration cycle in A) Compressor B) Condenser C) Evaporator D) Throttle valve 17. In a simple saturated vapour compression cycle, the refrigerant is in superheated condition A) before entering compressor B) before entering compressor B) before entering compressor C) before entering throttle valve D) before entering nondenser C) before entering throttle valve D) before entering nondenser C) before entering throttle valve D) before Throttling D) none of the above 19. Wet compression by before compression C) before Throttling D) none of the above 19. Wet compression takes place in wet region C) vapour compression in day region, but evaporation in wet region C) vapour compression in wet region, but leaves in superheated region D) None of the above	A) Liquid trapped up in the head of cylinder may damage the compressor valves
D) Mass flow rate per ton of refrigerant increases 11. An ideal refrigerant should have A) low latent heat of vaporization B) high critical temperature C) high boiling point D) high specific volume of vapour 12. The refrigerant leaving throttle valve is A) saturated liquid B) saturated vapour C) superheated vapour D) fraction as saturated vapour and remainder as liquid 13. Freon group of refrigerants A) Toxic B) inflammable C) non-toxic and non-inflammable D) Highly toxic and inflammable 14. The leaks of refrigerant from a cycle may be detected by A) Halide torch test B) Sulphur candle test C) Soap and water test D) any of the above (e) none of the above 15. During compression in a vapour compression cycle the refrigerant is superheated A) work done is increased B) C.O.P is increased C) Work done is reduced D) Refrigerating effect is reduced 16. Heat is rejected by the refrigerant, during vapor compression refrigeration cycle in A) Compressor B) Condenser C) Evaporator D) Throttle valve 17. In a simple saturated vapour compression cycle, the refrigerant is in superheated condition A) before entering compressor B) before entering condenser C) before entering throttle valve D) before entering evaporator 18. Sub-cooling is a process of cooling the refrigerant in vapour compression refrigeration system A) after compression B) before compression C) before Throttling D) none of the above 19. Wet compression takes place in wet region B) Vapour compression takes place in wet region B) Vapour compression in dry region, but evaporation in wet region C) vapour compression in wet region, but leaves in superheated region D) None of the above 20. The oil separator is incorporated in vapour compression refrigeration system	B) COP of the cycle decreases
11. An ideal refrigerant should have A) low latent heat of vaporization B) high critical temperature C) high boiling point D) high specific volume of vapour 12. The refrigerant leaving throttle valve is A) saturated liquid B) saturated vapour C) superheated vapour D) fraction as saturated vapour and remainder as liquid 13. Freon group of refrigerants A) Toxic B) inflammable C) non-toxic and non-inflammable D) Highly toxic and inflammable 14. The leaks of refrigerant from a cycle may be detected by A) Halide torch test B) Sulphur candle test C) Soap and water test D) any of the above (e) none of the above 15. During compression in a vapour compression cycle the refrigerant is superheated A) work done is increased B) C.O.P is increased C) Work done is reduced D) Refrigerating effect is reduced 16. Heat is rejected by the refrigerant, during vapor compression refrigeration cycle in A) Compressor B) Condenser C) Evaporator D) Throttle valve 17. In a simple saturated vapour compression cycle, the refrigerant is in superheated condition A) before entering compressor B) before entering condenser C) before entering throttle valve D) before entering evaporator 18. Sub-cooling is a process of cooling the refrigerant in vapour compression refrigeration system A) after compression vapour compression refrigeration cycle means A) Vapour compression takes place in wet region B) Vapour compression takes place in wet region B) Vapour compression in dry region, but leaves in superheated region D) None of the above 20. The oil separator is incorporated in vapour compression refrigeration system	C) Volumetric efficiency of compressor decreases
A) low latent heat of vaporization C) high boiling point D) high specific volume of vapour 12. The refrigerant leaving throttle valve is A) saturated liquid B) saturated vapour C) superheated vapour D) fraction as saturated vapour and remainder as liquid 13. Freon group of refrigerants A) Toxic B) inflammable C) non-toxic and non-inflammable D) Highly toxic and inflammable 14. The leaks of refrigerant from a cycle may be detected by A) Halide torch test B) Sulphur candle test C) Soap and water test D) any of the above (e) none of the above 15. During compression in a vapour compression cycle the refrigerant is superheated A) work done is increased B) C.O.P is increased C) Work done is reduced D) Refrigerating effect is reduced 16. Heat is rejected by the refrigerant, during vapor compression refrigeration cycle in A) Compressor B) Condenser C) Evaporator D) Throttle valve 17. In a simple saturated vapour compression cycle, the refrigerant is in superheated condition A) before entering compressor B) before entering condenser C) before entering throttle valve D) before entering evaporator 18. Sub-cooling is a process of cooling the refrigerant in vapour compression refrigeration system A) after compression B) before compression c) before Throttling D) none of the above 19. Wet compression takes place in wet region B) Vapour compression in dry region, but leaves in superheated region D) None of the above 20. The oil separator is incorporated in vapour compression refrigeration system	D) Mass flow rate per ton of refrigerant increases
C) high boiling point D) high specific volume of vapour 12. The refrigerant leaving throttle valve is A) saturated liquid B) saturated vapour C) superheated vapour D) fraction as saturated vapour and remainder as liquid 13. Freon group of refrigerants A) Toxic B) inflammable C) non-toxic and non-inflammable D) Highly toxic and inflammable 14. The leaks of refrigerant from a cycle may be detected by A) Halide torch test B) Sulphur candle test C) Soap and water test D) any of the above (e) none of the above 15. During compression in a vapour compression cycle the refrigerant is superheated A) work done is increased B) C.O.P is increased C) Work done is reduced D) Refrigerating effect is reduced 16. Heat is rejected by the refrigerant, during vapor compression refrigeration cycle in A) Compressor B) Condenser C) Evaporator D) Throttle valve 17. In a simple saturated vapour compression cycle, the refrigerant is in superheated condition A) before entering compressor B) before entering condenser C) before entering throttle valve D) before entering evaporator 18. Sub-cooling is a process of cooling the refrigerant in vapour compression refrigeration system A) after compression B) before compression C) before Throttling D) none of the above 19. Wet compression takes place in wet region B) Vapour compression in dry region, but evaporation in wet region C) vapour compression in wet region, but leaves in superheated region D) None of the above 20. The oil separator is incorporated in vapour compression refrigeration system	
12. The refrigerant leaving throttle valve is A) saturated liquid B) saturated vapour C) superheated vapour D) fraction as saturated vapour and remainder as liquid 13. Freon group of refrigerants A) Toxic B) inflammable C) non-toxic and non-inflammable D) Highly toxic and inflammable 14. The leaks of refrigerant from a cycle may be detected by A) Halide torch test B) Sulphur candle test C) Soap and water test D) any of the above (e) none of the above 15. During compression in a vapour compression cycle the refrigerant is superheated A) work done is increased B) C.O.P is increased C) Work done is reduced D) Refrigerating effect is reduced 16. Heat is rejected by the refrigerant, during vapor compression refrigeration cycle in A) Compressor B) Condenser C) Evaporator D) Throttle valve 17. In a simple saturated vapour compression cycle, the refrigerant is in superheated condition A) before entering compressor B) before entering condenser C) before entering throttle valve D) before entering evaporator 18. Sub-cooling is a process of cooling the refrigerant in vapour compression refrigeration system A) after compression B) before compression C) before Throttling D) none of the above 19. Wet compression takes place in wet region B) Vapour compression in dry region, but leaves in superheated region D) None of the above 20. The oil separator is incorporated in vapour compression refrigeration system	A) low latent heat of vaporization B) high critical temperature
A) saturated liquid B) saturated vapour C) superheated vapour D) fraction as saturated vapour and remainder as liquid 13. Freon group of refrigerants A) Toxic B) inflammable C) non-toxic and non-inflammable D) Highly toxic and inflammable 14. The leaks of refrigerant from a cycle may be detected by A) Halide torch test B) Sulphur candle test C) Soap and water test D) any of the above (e) none of the above 15. During compression in a vapour compression cycle the refrigerant is superheated A) work done is increased B) C.O.P is increased C) Work done is reduced D) Refrigerating effect is reduced 16. Heat is rejected by the refrigerant, during vapor compression refrigeration cycle in A) Compressor B) Condenser C) Evaporator D) Throttle valve 17. In a simple saturated vapour compression cycle, the refrigerant is in superheated condition A) before entering compressor B) before entering condenser C) before entering throttle valve D) before entering evaporator 18. Sub-cooling is a process of cooling the refrigerant in vapour compression refrigeration system A) after compression B) before compression C) before Throttling D) none of the above 19. Wet compression vapour compression refrigeration cycle means A) Vapour compression takes place in wet region B) Vapour compression in dry region, but evaporation in wet region C) vapour compression in wet region, but leaves in superheated region D) None of the above 20. The oil separator is incorporated in vapour compression refrigeration system	
C) superheated vapour D) fraction as saturated vapour and remainder as liquid 13. Freon group of refrigerants A) Toxic B) inflammable C) non-toxic and non-inflammable D) Highly toxic and inflammable 14. The leaks of refrigerant from a cycle may be detected by A) Halide torch test B) Sulphur candle test C) Soap and water test D) any of the above (e) none of the above 15. During compression in a vapour compression cycle the refrigerant is superheated A) work done is increased B) C.O.P is increased C) Work done is reduced D) Refrigerating effect is reduced 16. Heat is rejected by the refrigerant, during vapor compression refrigeration cycle in A) Compressor B) Condenser C) Evaporator D) Throttle valve 17. In a simple saturated vapour compression cycle, the refrigerant is in superheated condition A) before entering compressor B) before entering condenser C) before entering throttle valve D) before entering evaporator 18. Sub-cooling is a process of cooling the refrigerant in vapour compression refrigeration system A) after compression B) before compression C) before Throttling D) none of the above 19. Wet compression vapour compression refrigeration cycle means A) Vapour compression takes place in wet region B) Vapour compression in dry region, but evaporation in wet region C) vapour compression in wet region, but leaves in superheated region D) None of the above 20. The oil separator is incorporated in vapour compression refrigeration system	
13. Freon group of refrigerants A) Toxic B) inflammable C) non-toxic and non-inflammable D) Highly toxic and inflammable 14. The leaks of refrigerant from a cycle may be detected by A) Halide torch test B) Sulphur candle test C) Soap and water test D) any of the above (e) none of the above 15. During compression in a vapour compression cycle the refrigerant is superheated A) work done is increased B) C.O.P is increased C) Work done is reduced D) Refrigerating effect is reduced 16. Heat is rejected by the refrigerant, during vapor compression refrigeration cycle in A) Compressor B) Condenser C) Evaporator D) Throttle valve 17. In a simple saturated vapour compression cycle, the refrigerant is in superheated condition A) before entering compressor B) before entering evaporator 18. Sub-cooling is a process of cooling the refrigerant in vapour compression refrigeration system A) after compression B) before compression C) before Throttling D) none of the above 19. Wet compression vapour compression refrigeration cycle means A) Vapour compression takes place in wet region B) Vapour compression in dry region, but evaporation in wet region C) vapour compression in wet region, but leaves in superheated region D) None of the above 20. The oil separator is incorporated in vapour compression refrigeration system	, <u>, , , , , , , , , , , , , , , , , , </u>
A) Toxic B) inflammable C) non-toxic and non-inflammable D) Highly toxic and inflammable 14. The leaks of refrigerant from a cycle may be detected by A) Halide torch test B) Sulphur candle test C) Soap and water test D) any of the above (e) none of the above 15. During compression in a vapour compression cycle the refrigerant is superheated A) work done is increased B) C.O.P is increased C) Work done is reduced D) Refrigerating effect is reduced 16. Heat is rejected by the refrigerant, during vapor compression refrigeration cycle in A) Compressor B) Condenser C) Evaporator D) Throttle valve 17. In a simple saturated vapour compression cycle, the refrigerant is in superheated condition A) before entering compressor B) before entering condenser C) before entering throttle valve D) before entering evaporator 18. Sub-cooling is a process of cooling the refrigerant in vapour compression refrigeration system A) after compression B) before compression C) before Throttling D) none of the above 19. Wet compression vapour compression refrigeration cycle means A) Vapour compression takes place in wet region B) Vapour compression in dry region, but evaporation in wet region C) vapour compression in wet region, but leaves in superheated region D) None of the above 20. The oil separator is incorporated in vapour compression refrigeration system	
D) Highly toxic and inflammable 14. The leaks of refrigerant from a cycle may be detected by A) Halide torch test B) Sulphur candle test C) Soap and water test D) any of the above (e) none of the above 15. During compression in a vapour compression cycle the refrigerant is superheated A) work done is increased B) C.O.P is increased C) Work done is reduced D) Refrigerating effect is reduced 16. Heat is rejected by the refrigerant, during vapor compression refrigeration cycle in A) Compressor B) Condenser C) Evaporator D) Throttle valve 17. In a simple saturated vapour compression cycle, the refrigerant is in superheated condition A) before entering compressor B) before entering condenser C) before entering throttle valve D) before entering evaporator 18. Sub-cooling is a process of cooling the refrigerant in vapour compression refrigeration system A) after compression B) before compression C) before Throttling D) none of the above 19. Wet compression vapour compression refrigeration cycle means A) Vapour compression takes place in wet region B) Vapour compression in dry region, but evaporation in wet region C) vapour compression in wet region, but leaves in superheated region D) None of the above 20. The oil separator is incorporated in vapour compression refrigeration system	
14. The leaks of refrigerant from a cycle may be detected by A) Halide torch test B) Sulphur candle test C) Soap and water test D) any of the above (e) none of the above 15. During compression in a vapour compression cycle the refrigerant is superheated A) work done is increased B) C.O.P is increased C) Work done is reduced D) Refrigerating effect is reduced 16. Heat is rejected by the refrigerant, during vapor compression refrigeration cycle in A) Compressor B) Condenser C) Evaporator D) Throttle valve 17. In a simple saturated vapour compression cycle, the refrigerant is in superheated condition A) before entering compressor B) before entering condenser C) before entering throttle valve D) before entering evaporator 18. Sub-cooling is a process of cooling the refrigerant in vapour compression refrigeration system A) after compression B) before compression C) before Throttling D) none of the above 19. Wet compression vapour compression refrigeration cycle means A) Vapour compression takes place in wet region B) Vapour compression in dry region, but evaporation in wet region C) vapour compression in wet region, but leaves in superheated region D) None of the above 20. The oil separator is incorporated in vapour compression refrigeration system	
A) Halide torch test B) Sulphur candle test C) Soap and water test D) any of the above (e) none of the above 15. During compression in a vapour compression cycle the refrigerant is superheated A) work done is increased B) C.O.P is increased C) Work done is reduced D) Refrigerating effect is reduced 16. Heat is rejected by the refrigerant, during vapor compression refrigeration cycle in A) Compressor B) Condenser C) Evaporator D) Throttle valve 17. In a simple saturated vapour compression cycle, the refrigerant is in superheated condition A) before entering compressor B) before entering condenser C) before entering throttle valve D) before entering evaporator 18. Sub-cooling is a process of cooling the refrigerant in vapour compression refrigeration system A) after compression B) before compression C) before Throttling D) none of the above 19. Wet compression vapour compression refrigeration cycle means A) Vapour compression takes place in wet region B) Vapour compression in dry region, but evaporation in wet region C) vapour compression in wet region, but leaves in superheated region D) None of the above 20. The oil separator is incorporated in vapour compression refrigeration system	
C) Soap and water test D) any of the above (e) none of the above 15. During compression in a vapour compression cycle the refrigerant is superheated A) work done is increased B) C.O.P is increased C) Work done is reduced D) Refrigerating effect is reduced 16. Heat is rejected by the refrigerant, during vapor compression refrigeration cycle in A) Compressor B) Condenser C) Evaporator D) Throttle valve 17. In a simple saturated vapour compression cycle, the refrigerant is in superheated condition A) before entering compressor B) before entering condenser C) before entering throttle valve D) before entering evaporator 18. Sub-cooling is a process of cooling the refrigerant in vapour compression refrigeration system A) after compression B) before compression C) before Throttling D) none of the above 19. Wet compression vapour compression refrigeration cycle means A) Vapour compression takes place in wet region B) Vapour compression in dry region, but evaporation in wet region C) vapour compression in wet region, but leaves in superheated region D) None of the above 20. The oil separator is incorporated in vapour compression refrigeration system	
15. During compression in a vapour compression cycle the refrigerant is superheated A) work done is increased B) C.O.P is increased C) Work done is reduced D) Refrigerating effect is reduced 16. Heat is rejected by the refrigerant, during vapor compression refrigeration cycle in A) Compressor B) Condenser C) Evaporator D) Throttle valve 17. In a simple saturated vapour compression cycle, the refrigerant is in superheated condition A) before entering compressor B) before entering condenser C) before entering throttle valve D) before entering evaporator 18. Sub-cooling is a process of cooling the refrigerant in vapour compression refrigeration system A) after compression B) before compression C) before Throttling D) none of the above 19. Wet compression vapour compression refrigeration cycle means A) Vapour compression takes place in wet region B) Vapour compression in dry region, but evaporation in wet region C) vapour compression in wet region, but leaves in superheated region D) None of the above 20. The oil separator is incorporated in vapour compression refrigeration system	
A) work done is increased B) C.O.P is increased C) Work done is reduced D) Refrigerating effect is reduced 16. Heat is rejected by the refrigerant, during vapor compression refrigeration cycle in A) Compressor B) Condenser C) Evaporator D) Throttle valve 17. In a simple saturated vapour compression cycle, the refrigerant is in superheated condition A) before entering compressor B) before entering condenser C) before entering throttle valve D) before entering evaporator 18. Sub-cooling is a process of cooling the refrigerant in vapour compression refrigeration system A) after compression B) before compression C) before Throttling D) none of the above 19. Wet compression vapour compression refrigeration cycle means A) Vapour compression takes place in wet region B) Vapour compression in dry region, but leaves in superheated region C) vapour compression in wet region, but leaves in superheated region D) None of the above 20. The oil separator is incorporated in vapour compression refrigeration system	
C) Work done is reduced D) Refrigerating effect is reduced 16. Heat is rejected by the refrigerant, during vapor compression refrigeration cycle in A) Compressor B) Condenser C) Evaporator D) Throttle valve 17. In a simple saturated vapour compression cycle, the refrigerant is in superheated condition A) before entering compressor B) before entering condenser C) before entering throttle valve D) before entering evaporator 18. Sub-cooling is a process of cooling the refrigerant in vapour compression refrigeration system A) after compression B) before compression C) before Throttling D) none of the above 19. Wet compression vapour compression refrigeration cycle means A) Vapour compression takes place in wet region B) Vapour compression in dry region, but evaporation in wet region C) vapour compression in wet region, but leaves in superheated region D) None of the above 20. The oil separator is incorporated in vapour compression refrigeration system	
16. Heat is rejected by the refrigerant, during vapor compression refrigeration cycle in A) Compressor B) Condenser C) Evaporator D) Throttle valve 17. In a simple saturated vapour compression cycle, the refrigerant is in superheated condition A) before entering compressor B) before entering condenser C) before entering throttle valve D) before entering evaporator 18. Sub-cooling is a process of cooling the refrigerant in vapour compression refrigeration system A) after compression B) before compression C) before Throttling D) none of the above 19. Wet compression vapour compression refrigeration cycle means A) Vapour compression takes place in wet region B) Vapour compression in dry region, but evaporation in wet region C) vapour compression in wet region, but leaves in superheated region D) None of the above 20. The oil separator is incorporated in vapour compression refrigeration system	
A) Compressor B) Condenser C) Evaporator D) Throttle valve 17. In a simple saturated vapour compression cycle, the refrigerant is in superheated condition A) before entering compressor B) before entering condenser C) before entering throttle valve D) before entering evaporator 18. Sub-cooling is a process of cooling the refrigerant in vapour compression refrigeration system A) after compression B) before compression C) before Throttling D) none of the above 19. Wet compression vapour compression refrigeration cycle means A) Vapour compression takes place in wet region B) Vapour compression in dry region, but evaporation in wet region C) vapour compression in wet region, but leaves in superheated region D) None of the above 20. The oil separator is incorporated in vapour compression refrigeration system	, , ,
17. In a simple saturated vapour compression cycle, the refrigerant is in superheated condition A) before entering compressor B) before entering condenser C) before entering throttle valve D) before entering evaporator 18. Sub-cooling is a process of cooling the refrigerant in vapour compression refrigeration system A) after compression B) before compression C) before Throttling D) none of the above 19. Wet compression vapour compression refrigeration cycle means A) Vapour compression takes place in wet region B) Vapour compression in dry region, but evaporation in wet region C) vapour compression in wet region, but leaves in superheated region D) None of the above 20. The oil separator is incorporated in vapour compression refrigeration system	
A) before entering compressor B) before entering condenser C) before entering throttle valve D) before entering evaporator 18. Sub-cooling is a process of cooling the refrigerant in vapour compression refrigeration system A) after compression B) before compression C) before Throttling D) none of the above 19. Wet compression vapour compression refrigeration cycle means A) Vapour compression takes place in wet region B) Vapour compression in dry region, but evaporation in wet region C) vapour compression in wet region, but leaves in superheated region D) None of the above 20. The oil separator is incorporated in vapour compression refrigeration system	
C) before entering throttle valve D) before entering evaporator 18. Sub-cooling is a process of cooling the refrigerant in vapour compression refrigeration system A) after compression B) before compression C) before Throttling D) none of the above 19. Wet compression vapour compression refrigeration cycle means A) Vapour compression takes place in wet region B) Vapour compression in dry region, but evaporation in wet region C) vapour compression in wet region, but leaves in superheated region D) None of the above 20. The oil separator is incorporated in vapour compression refrigeration system	
18. Sub-cooling is a process of cooling the refrigerant in vapour compression refrigeration system A) after compression B) before compression C) before Throttling D) none of the above 19. Wet compression vapour compression refrigeration cycle means A) Vapour compression takes place in wet region B) Vapour compression in dry region, but evaporation in wet region C) vapour compression in wet region, but leaves in superheated region D) None of the above 20. The oil separator is incorporated in vapour compression refrigeration system	
system A) after compression B) before compression C) before Throttling D) none of the above 19. Wet compression vapour compression refrigeration cycle means A) Vapour compression takes place in wet region B) Vapour compression in dry region, but evaporation in wet region C) vapour compression in wet region, but leaves in superheated region D) None of the above 20. The oil separator is incorporated in vapour compression refrigeration system	
A) after compression B) before compression C) before Throttling D) none of the above 19. Wet compression vapour compression refrigeration cycle means A) Vapour compression takes place in wet region B) Vapour compression in dry region, but evaporation in wet region C) vapour compression in wet region, but leaves in superheated region D) None of the above 20. The oil separator is incorporated in vapour compression refrigeration system	
 19. Wet compression vapour compression refrigeration cycle means A) Vapour compression takes place in wet region B) Vapour compression in dry region, but evaporation in wet region C) vapour compression in wet region, but leaves in superheated region D) None of the above 20. The oil separator is incorporated in vapour compression refrigeration system 	•
 A) Vapour compression takes place in wet region B) Vapour compression in dry region, but evaporation in wet region C) vapour compression in wet region, but leaves in superheated region D) None of the above 20. The oil separator is incorporated in vapour compression refrigeration system 	
 B) Vapour compression in dry region, but evaporation in wet region C) vapour compression in wet region, but leaves in superheated region D) None of the above 20. The oil separator is incorporated in vapour compression refrigeration system 	
C) vapour compression in wet region, but leaves in superheated regionD) None of the above20. The oil separator is incorporated in vapour compression refrigeration system	
D) None of the above20. The oil separator is incorporated in vapour compression refrigeration system	
20. The oil separator is incorporated in vapour compression refrigeration system	
A) Between evaporator and compressor B) between compressor and condenser	A) Between evaporator and compressor B) between compressor and condenser

C) Between condenser and Throttle valve D) between throttle valve and evaporator				
21. In vapour compression refrigeration cycle the following data is available, Heat rejected in				
condenser = 65 KW, Work done in compressor = 10 kw, then COP (refrigerator) is				
A) 4.5 B) 5.5 C) 6.5 D) not possible to find with the given data				
22. Following results are tabulated for vapour compression refrigeration cycle, Enthalpy at suction				
= 190 kJ/kg, Enthalpy at discharge from compressor = 210 kJ/kg, Enthalpy at exit from condenser				
= 80 kJ/kgCOP of cycle would be				
A) 3.5 B) 4.5 C) 5.5 D) 6.5 23. For simple saturated vapour compression refrigeration cycle operating between 5°C and 40°C,				
and the refrigerants being R-11, R-12, R-717 and R-22, the evaporator pressure is highest for				
A) R-11 B) R-12 C) R-717 D) R-22				
24. For simple saturated vapour compression refrigeration cycle operating between 5°C and 40°C,				
and the refrigerants being R-11, R-12, R-717 and R-22, the compressor displacement per min per				
ton of refrigeration is highest for				
A) R-11 B) R-12 C) R-717 D) R-22				
25. With reciprocating compressor in vapour compression refrigeration system, wet compression is				
not desirable because				
A) Liquid trapped up in the head of cylinder may damage the compressor valves				
B) COP of the cycle decreases				
C) Volumetric efficiency of compressor decreasesD) Mass flow rate per ton of refrigerant increases				
26. An ideal refrigerant should have				
A) Low latent heat of vaporization B) lower critical temperature				
C) Lower boiling point D) high specific volume of vapour				
27. The refrigerant leaving throttle valve is				
A) Saturated liquid B) saturated vapour				
C) Superheated vapour D) fraction as saturated vapour and remainder as liquid				
28. Freon group of refrigerants				
A) Toxic B) inflammable (C) Non toxic and non inflammable) highly toxic and inflammable				
C) Non-toxic and non-inflammable) highly toxic and inflammable29. The leaks of refrigerant from a cycle may be detected by				
A) Halide torch test B) Sulphur candle test				
C) Soap and water test D) any of the above (e) none of the above				
30. During compression in a vapour compression cycle the refrigerant is superheated				
A) C.O.P is reduced B) C.O.P is increased				
C) Work done is reduced D) Refrigerating effect is reduced				
LINIT III DEEDICED ATION OVOTEM COMPONENTO				
UNIT-III REFRIGERATION SYSTEM COMPONENTS				
1. On a p-h plot as pressure increases latent heat []				
a) decreases b) remains constant c) increases d) initially increases then decreases				
2. In a simple vapour compression process refrigerant, compressor is used to []				
a) raise the pressure and temperature of the refrigerant				
b) raise the pressure and lower the temperature of the refrigerant				
c) lower the enthalpy of the refrigerant d) increase the entropy of the refrigerant				
3. The heat rejection factor (HRF) is given by[
a) 1 + COP b) 1 - COP c) 1 + (COP)2 d) equal to COP				

4. Most air-cooled condensers are designed to operate with temperature difference of []
a) 5 0 C b) 10 0 C c) 14 0 C d) 20 0 C
5. Power input to the compressor is equal to product of work input
a) Mass b) Time c) Density d) Specific Volume
6. In actual vapour compression cycle the compression process is
a) Isentropic b) Polytropic c) Neither Isentropic nor Polytropic d) Isobaric
7. The effect of clearance volume in reciprocating refrigerant compressors on the work done and
the power required for the compressing the refrigerant is effect .
a) Increases b) Decreases c) No Effect d) Increases and then decreases
8. The throttling device used in the domestic refrigerator is
a) Cappilary tube b) Atomatic Expansion Valve
c) Dry Expansion Valve d) None of the above
9. An automatic expansion valve is required to maintain constant in the evaporator
a) Pressure b) Sp Volume c) Entropy d) temperature
10.A domestic refrigerator has the co-efficient of performance []
a) equal to 1.0 b)less than 1.0 c) more than 1.0 d)any value
11. The pipe material for the refrigerators using ammonia as refrigerant be of []
a) copper b)cast steel or wrought iron c)brass d)aluminum
12. The co-efficient of performance(c.o.p) of a refrigerator working on a reserved carnot cycle is
Mathematically equal to []
a) (T1-T2)/ T1 b) T1/ (T2 -T1) c) T2/ (T1-T2) d) (T2 -T1) /T1
13. Horse power per ton of refrigeration is expressed as []
a) 4.75/cop b)cop/4.75 c)4.75*cop d)47.5/cop
14. Air refrigeration operates on []
a) Carnot cycle b) reversedCarnot cycle c) rankine cycle d) brayton cycle
15. For better cop of refrigerator, the pressure range corresponding to temperature in evaporator
and condenser must be []
a) Small b) high c) equal d) anything
16. The bank of tubes at the back of domestic refrigerator are []
a) Condenser tubes b) evaporator tubes c) capillary tubes d) throttling device
17. Presence of moisture in a refrigerant affect the working of []
a) compressor b)condenser c)evaporator d)expansion valve
18. The refrigerant used in vapour absorption refrigerator is []
a) freon-12 b) ammonia c) co2 d) aqua-ammonia
19. Heat is absorbed by a refrigerant, during a refrigeration cycle in a []
a) Condenser b) evaporator c) compressor d) throttle valve
20. The widely used refrigerant in domestic refrigerator, is

a) Freon 12	b) CO2	c) NH3	d) R440	
21. The refri	gerant used for	steam jet refrig	eration is	
a) Water	b) Steam	c) Ammonia	d) Aqua Ammonia	
22. The boili	ng point of Fre	eon-22 is		
a) -33^{0} C	b) -4	8.5° C c) 10° C	d) -40.8° C	
23. The refri	gerant should l	nave the freezing	g temperature_	
A) below -35	5°c B) be	elow -25°c	C) below -15°c	D) below -5°c
		vest specific vol		
A)CO2	B) SO2	C)NH3	D)R12	
25. The Evap	porator used in	household refri	gerator is	
a) Frosting I	Evaporator	b) No	n Frosting Evaporator	
e) Defrosting	g Evaporator	d) No	e of these.	
26. The evap	orator general	y used for wine	cooling and in petrole	eum industry for chilling oil is
a) Plate Evap	oorator b) Fi	nned Evaporato	r	
c) Tube-in-T	ube Evaporato	r d) Shell and	Гube Evaporator	
27. An Evap	orator is also k	nown as		
a) Freezing (Coil b) Co	ooiling Coil	c) Chilling Coil	d) All of these.
28. The natu	ral convection	air cooled conde	ensers are used in	
a) Domestic	Refrigerator	b) Water Coo	olers c) Room Air	Conditioners d) All of these.
29. The work	c required for r	eciprocating con	mpressor is minimum	when the compression process is
a) Isotherma	l b) Isentropio	c) Polytropic	d) Adiabatic	
30. Thermos	tatic Expansion	n valve is used i	n type of evap	orators.
a) Flooded	b) D	X Coil c) Dry	y	
	UNIT – IV V	APOUR ABSO	RBTION REFRIGE	RATION SYSTEM.
1. Co-efficie	nt of performa	nce of vapour at	osorption refrigeration	system as compared to that for
vapour comp	ression refrige	ration system is		[]
(a) more	(b) less	(c) ma	ay be more or less	(d) un - predictable
2. The functi	on of compres	sor in vapour co	mpression refrigeratio	on system is performed in vapour
absorption sy	ystem by			[]
(a) generator	(b) absorber (c) generator, abs	sorber and liquid pump	o (d) absorber and liquid pump 3.
In vapour ab	sorption refrig	eration system h	eating in generator is	done at 100°C, refrigeration in
•		•		30°C. The (COP)max is
(a) 0.5	(b) 0.35	(c) 2	(d) in sufficie	, , ,
` /	system of refr	` /	` /	
	·	•	d pumps (c) no liquid	pump(d) none of the above []
•		· •	g working substances	

(a) Hydrogen (b) Ammonia and Hydrogen (c) Ammonia and water (d)	Ammonia	hydrog	en and
water []			
6. Which of the following system can be called as mechanical system of	of refrigera	tion	
(a) Vapour absorption system (b) Vapour compression system			
(c) Steam jet refrigeration system (d) None of the above		[]
7. The vapour absorption refrigeration system using Ammonia – water	has cycle	peratin	g
pressures			
(a) higher than that using Lithium Bromide – water			
(b) lower than that using Lithium Bromide – water			
(c) may be higher or lower depending upon application			
(d) higher for sub-zero application and lower for above zero application	n	[]
8. Shaft work required for vapour absorption system to produce 1 ton r	efrigeratio	n	
may be only			
(a) 50 to 60% of that required for vapour compression system			
(b) 20 to 30% of that required for vapour compression system			
(c) 1 to 2% of that required for vapour compression system			
(d) none of the above		[]
9. Work of compression of the fluid in vapour absorption refrigeration	system as		
compared to that for vapour compression refrigeration system is			
(a) less (b) more (c) may be more or less (d) un - predictable		[]
10. The function of compressor in vapour compression refrigeration sy	stem		
is performed in vapour absorption system by]		
(a) generator (b) absorber (c) generator, absorber and liquid pump (d) a	ıbsorber an	d liquid	pump 11.
In vapour absorption refrigeration system heating in generator is done	at 100°C, r	efrigera	tion in
evaporator at 10°C and cooling by cooling water in condenser at 30°C.	The (COP)max is	
(a) 0.5 (b) 0.35 (c) 2 (d) in sufficient data		[]
12. Munters Platen system of refrigeration is			
(a) Vapour absorption system with ammonia and water			
(b) Vapour compression system with ammonia as working substance			
(c) Electrolux system with Hydrogen, ammonia and water as working s	substances		
(d) none of the above		[]
13. Electrolux refrigerators is			
(a) Vapour compression refrigerator with one compressor			
(b) vapour absorption refrigerator with no pump			
(c) vapour absorption refrigerator with one aqua pump			
(d) None of the above	[]
14. Which of the following system can be called as mechanical system	of refriger	ation	

(a) Vapour absorption system (b) Vapour compression system		
(c) Steam jet refrigeration system (d) None of the above]	
15. The vapour absorption refrigeration system using Ammonia – water has cyc	le	
operating pressures		
(a) higher than that using Lithium Bromide – water		
(b) lower than that using Lithium Bromide – water		
(c) may be higher or lower depending upon application		
(d) higher for sub-zero application and lower for above zero application	[]
16. Co-efficient of performance of vapour absorption refrigeration system as co	mpared	
to that for vapour compression refrigeration system is		
(a) more (b) less (c) may be more or less (d) un – predictable	[]
17. R-718 is designated as which refrigerants		
a) Water b) Ammonia c) CO ₂ d) SO ₂	[]
18. Lithium Bromide – Water absorption refrigeration system refrigerant is		
A) Lithium b) Bromide c) Water d) Lithium Bromide	[]
19. which device allows only dehydrated ammonia gas to pass to the condenser	in Vapo	our
absorption refrigeration system.		
a) Absorber b) Generator c) Rectefier d) heat excahnger	[]
20. The Purpose of Analyzer in VAR system is		
a) To Remove the water particle b) To Condensate the Water partic	le	
c) To produce Anhydrous Ammonia d) All the Above.	[]
21. 1. Which of the following refrigerant used in the steam jet refrigeration?		
a) Ammonia b) R12 c) Water d) Air	[]
22. In a Vapour Absorption refrigerator, heat is rejected in:		
a) Condenser Only b) Generator Only		
C) Absorber only d) Condenser and absorber		
23. The load control in steam jet refrigeration cycle is obtained by		[]
A. increasing the mass flow rate of motive steam through nozzle		
B. decreasing the mass flow rate of motive steam through nozzle		
C. using multiple parallel ejectors		
D. no method available		
25. The ratio of isentropic increase to actual enthaply increase required for the	ompres	sion of the
motive steam and the water vapours is known as		
a) Nozzle Efficiency b) Boiler Efficiency		
c) Entrainment Efficiency d) Compression efficiency.		
26. Steam jet refrigeration cycle and vapour compression refrigeration cycle are	quite s	imilar in as
much		

- A. that both have evaporators where heat is absorbed

 B. that both have condensers where heat is rejected

 C. that both have compression devices for increasing pressure

 D. that both have compression devices for decreasing pressure

 27. In Steam Jet refrigeration system the motive steam expanded in
 - a) Convergent Nozzle b) Divergent Nozzle c) Convergent Divergent Nozzle d)Any Nozzle
 - 28. The velocity of steam at the exit of the nozzle is
 - a) Supersonic b) Sonic c) Sub Sonic d) None of these.
 - 29. The COP of steam jet refrigeration system varies from
 - a) 0.5 to 0.8 b) 2 to 4 c) 5 to 10 d) None of these.
 - 30. The compression device used in stean jet refrigeration is
 - a) Vapour Compressor b) Steam Ejector c) Diffuser d) Liquid Pump

UNIT-5: Psychometric Properties and Processes

- 1. Dew point temperature of air at one atmospheric pressure (1.013 bar) is 18oC. The air dry bulb temperature, is 30oC. The saturation pressure of water at 18oC and 30oC are 0.02062 bar and 0.04241 bar respectively. The specific heat of air and water vapour respectively are 1.005 and 1.88 kJ/kg K
- and the latent heat of vaporization of water at 0oC is 2500 kJ/kg. The specific humidity and enthalpy (kJ/kg of dry air) of this moist air respectively, are [GATE 2004]
 - (a) 0.01051, 52.64 (b) 0.01291, 63.15 (c) 0.01481, 78.60 (d) 0.01532, 81.40
- 2.A moist air sample has dry bulb temperature of 30° C and specific humidity of 11.5 g water vapour per kg dry air. Assume molecular weight of air as 28.93. If the saturation vapour pressure of water at 30° C is 4.24 kPa and the total pressure is 90 kPa, then the relative humidity (in %) of air sample is
 - (a) 50.5 (b) 38.5 (c) 56.5 (d) 68.5 [GATE-2010]
- 3. For a typical sample of ambient air (at 35 °C, 75% relative humidity and standard atmospheric pressure), the amount of moisture in kg per kg of dry air will be approximately [GATE-2005] (a) 0.002 (b) 0.027 (c) 0.25 (d) 0.75
- 4. For air at a given temperature, as the relative humidity is increased isothermally, [GATE-2001]
- (a) the wet bulb temperature and specific enthalpy increase
- (b) the wet bulb temperature and specific enthalpy decrease
- (c) the wet bulb temperature increases and specific enthalpy decreases
 - (d) the wet bulb temperature decreases and specific enthalpy increases
- 5. Dew point temperature is the temperature at which condensation begins when the air is cooled at constant [GATE-2006]
 - (a) volume (b) entropy (c) pressure (d) enthalpy
- 6. For air with a relative humidity of 80% [GATE-2003]
- (a) the dry bulb temperature is less than the wet bulb temperature
- (b) the dew point temperature is less than wet bulb temperature
- (c) the dew point and wet bulb temperatures are equal
- (d) the dry bulb and dew point temperatures are equal
- 7. The statements concern Psychrometric chart. [GATE-2006]

- 1. Constant relative humidity lines are uphill straight lines to the right
- 2. Constant wet bulb temperature lines are downhill straight lines to the right
- 3. Constant specific volume lines are downhill straight lines to the right
- 4. Constant enthalpy lines are coincident with constant wet bulb temperature lines Which of the statements are correct?
 - (a) 2 and 3 (b) 1 and 2 (c) 1 and 3 (d) 2 and 4
- 8. When atmospheric air is heated at constant pressure, then which one is not correct. [GATE-2000]
- (a) humidity ratio does not change
- (b) relative humidity increases
- (c) dew point temperature does not change
 - (d) wet bulb temperature increases
- 9. During chemical dehumidification process of air [GATE-2004]
- (a) dry bulb temperature and specific humidity decrease
- (b) dry bulb temperature increases and specific humidity decreases
- (c) dry bulb temperature decreases and specific humidity increases
 - (d) dry bulb temperature and specific humidity increase
- 10. Water at 42°C is sprayed into a stream of air at atmospheric pressure, dry bulb temperature of 40oC and a wet bulb temperature of 20oC. The air leaving the spray humidifier is not saturated. Which of the following statements is true? [GATE-2005]
- (a) Air gets cooled and humidified (b) air gets heated and humidified
 - (c) Air gets heated and dehumidified (d) Air gets cooled and dehumidified
- 11. For the following "Matching" exercise, choose the correct one from among the alternatives [GATE-2000]

A, B, C and D

Group 1 Group 2

- 1. Marine Diesel Engine
- (A) Two stroke engine 2. Air conditioning (B) Four stroke engine
- 3. Steam Power Plant
- (C) Rotary engine
- 4. Gas Turbine Power Plant (D) Cooling and dehumidification
 - (E) Cooling tower
 - (F) Brayton cycle
 - (G) Rankine cycle
 - (H) D slide valve

(a)	(b)	(c)	(d)
1-B	1-C	1-A	1-A
2-E	2-F	2-F	2-D
3-F	3-E	3-G	3-G
4-H	4-G	4-E	4-F

12. Air (at atmospheric pressure) at a dry bulb temperature of 40°C and wet bulb temperature of 20°C is humidified in an air washer operating with continuous water recirculation. The wet bulb depression (i.e. the difference between the dry and wet bulb temperatures) at the exit is 25% of that at the inlet. The dry bulb temperature at the exit of the air washer is closest to

(A) 10^{0} C (B) 20^{0} C (C) 25^{0} C (D) 30^{0} C [GATE-2008]

13. Moist air at a pressure of 100 kPa is compressed to 500 kPa and then cooled to 350C in an after cooler. The air at the entry to the after cooler is unsaturated and becomes just saturated at the exit of the after cooler. The saturation pressure of water at 35°C is 5.628 kPa. The partial pressure of water vapour (in kPa) in the moist air entering the compressor is closest to [GATE-2008]

- 14. The statements concern Psychrometric chart. [GATE-2006]
- 1. Constant relative humidity lines are uphill straight lines to the right

2. Constant wet bulb temperature lines are downhill straight lines to the right 3. Constant specific volume lines are downhill straight lines to the right 4. Constant enthalpy lines are coincident with constant wet bulb temperature lines Which of the statements are correct? (a) 2 and 3 (b) 1 and 2 (c) 1 and 3 (d) 2 and 4 15. Consider the following statements: [IES-1997] A psychrometer measures 1. wet bulb temperature 3. dry bulb temperature.

2. dew point temperature

On these statements

- (a) 1 alone is correct (b) 2 and 3 are correct (c) 1 and 3 are correct (d) 1, 2 and 3 are correct
- 16. If the specific heats of dry air and water vapour are 1.00 kJ/kg-K and 1.88 kJ/kg-K respectively and the humidity ratio is 0.011, then the specific heat of moist air at 25°C and 50% relative humidity will be [IES-1994]

(a) 1.0207 kJ/kg-K

- (b) 1.869 kJ/kg-K
- (c) 1.891 kJ/kg-K
- (d) 0.9793 kJ/kg-K
- 17. If Pa and Pv denote respectively the partial pressure of dry air and that of water vapour in moist air, the specific humidity of air is given by

- 18. The humidity ratio of atmospheric air at 28°C dbt and 760 mm of Hg is 0.016 kgv/kg-da. What is the partial pressure of water vapour? [IES-2009]
- (a) 2.242kN/m2 (b) 2.535kN/m2 (c) 3.535kN/m2 (d) 4.242kN/m2
- 19. In a sample of moist air at standard atmospheric pressure of 101.325 kPa and 26°C the partial pressure of water vapour is 1.344 kPa. If the saturation pressure of water vapour is 3.36 kPa at $26 \square$ C, then what are the humidity ratio and relative humidity of moist air sample? [IES-2009]
- (a) 0.00836 and 1.32% (b) 0.00836 and 40% (c) 0.01344 and 1.32% (d) 0.01344 and 40%
- 20. The equation φ_{PS}^{Pv} = is used to calculate the (pv = partial pressure of water vapour in moist air at a given temperature, Ps = saturation pressure of water vapour at the same temperature) [IES-1999]
- (a) relative humidity (b) degree of saturation(c) specific humidity (d) absolute humidity
- 21. If the volume of moist air with 50% relative humidity is isothermally reduced to half its original volume, then relative humidity of moist air becomes [IES-2003]
- (a) 25 % (b) 60 % (c) 75 % (d) 100 %
- 22. The wet bulb depression is zero, when relative humidity is equal to

[IES-2006]

- (a) 100% (b) 60% (c) 40% (d) Zero
- 23. Evaporative air-cooler is used effectively when [IES-1995]
- (a) dry bulb temperature is very close to the wet bulb temperature
- (b) dry bulb temperature is high and relative humidity is high
- (c) dry-bulb temperature is low and relative humidity is high
- (d) dry bulb temperature is high and the relative humidity is low.
- 24. What is the saturation temperature at the partial pressure of water vapour in the air-water vapour mixture called? [IES-2009]
- (a) Dry bulb temperature (b) Web bulb temperature (c) Dew point temperature (d) Saturation temperature
- 25. In a cooling tower, the minimum temperature to which water can be cooled is equal to the [IES-1995; 20011
- (a) dew point temperature of the air at the inlet (b) dry bulb temperature of the air at the inlet
- (c) thermodynamic wet bulb temperature of the air at the inlet
- (d) mean of the dew point and dry bulb temperature of the air at the inlet
- 26. In a chilled-water spray pond, the temperature of water is lower than dew point temperature of entering air. The air passing through the spray undergoes [IES-1999]

- (a) cooling and humidification (b) cooling and dehumidification(c) sensible cooling (d) dehumidification
- 27. When a stream of moist air is passed over a cold and dry cooling coil such that no condensation takes place, then the air stream will get cooled along the line of [IES-1996]
- (a) constant web bulb temperature (b) constant dew point temperature
- (c) constant relative humidity (d) constant enthalpy
- 28. Air at state 1 (dpt 10° C, W = 0.0040 kg/kgair) mixes with air at state 2 (dpt= 18° C, W = 0.0051 kg/kgair) in the ratio 1 to 3 by weight. The degree of saturation (%) of the mixture is (the specific humidity of saturated air at 13.6° C, W = 0.01 kg/kgair) [IES-1999]
- (a) 25 (b) 30 (c) 48 (d) 62
- 29. Match List I with List II and select the correct answer using the code given below the Lists: [IES-2005]

List I List II

A Degree of saturation

- 1. Measure of latent enthalpy of moist air
- B. Dry bulb temperature
- 2. Measure of total enthalpy of moist air
- C. Wet bulb temperature
- 3. Measure of the capacity of air to absorb moisture
- D. Dew point temperature
- 4. Measure of sensible enthalpy of moist air

A B C D

ABCD

(a) 2 1 3 4

(b) 3 4 2 1

(c) 2 4 3 1

(d) 3 1 2 4

- 30. Consider the following statements: [IES-2004]
- 1. The specific humidity is the ratio of the mass of water vapour to the mass of dry air in a given volume of the mixture
- 2. The relative humidity of the atmospheric air is the ratio of the actual mass of the water vapour in a given volume to that which it would have if it were saturated at the same temperature
- 3. The degree of saturation is defined as the ratio of the specific humidity of a mixture to the specific humidity of the mixture when saturated at the same temperature

Which of the statements given above are correct?

- (a) 1 and 2
- (b) 2 and 3
- (c) 1 and 3
- (d) 1, 2 and 3
- 31. In a cooling tower the sum of range and approach is equal to twice the wet bulb depression. Then [IES-2003]
- (a) Dry bulb temperature is mean of water inlet temperature and wet bulb temperature
- (b) Dry bulb temperature is mean of water outlet temperature and wet bulb temperature
- (c) Water inlet temperature is mean of dry bulb temperature and wet bulb temperature
- (d) Water inlet temperature is mean of water outlet temperature and wet bulb temperature
- 32.In case A, moist air is adiabatically saturated and in case B, moist air is isobarically saturated.

The saturation temperatures in cases A and B are respectively [IES-2002]

- (a) dry bulb temperature and wet bulb temperature
- (b) dew point temperature and wet bulb temperature
- (c) wet bulb temperature and dew point temperature
- (d) wet bulb temperature and dry bulb temperature
- 33. When the wet bulb and dry bulb temperatures are equal, which of the following statements is/are correct? [IES-2005]
- 1. Air is fully saturated.2. Dew point temperature is reached.
- 3. Partial pressure of vapour equals to the total pressure.4. Humidity ratio is 100%.
- (a) 1 and 2 (b) 1 only (c) 1, 2 and 4 (d) 2 and 3
- 34. When the wet and dry bulb temperatures are identical, which of the following statements is/are true? [IES-2001; 2003]
- 1. Air is fully saturated
- 2. Dew point temperature is reached
- 3. Humidity ratio is unity 4. A P
 - 4. A Partial pressure of vapour equals total pressure

Select the correct answer from the codes given below:

- (a) 1 only (b) 1 and 2 (c) 3 and 4 (d) 1, 2, 3 and 4
- 35. When dry-bulb and wet-bulb temperatures are identical, it means that the
- (a) air is fully saturated and dew-point temperature has reached [IES-2000]
- (b) air is fully saturated
- (c) dew-point temperature has reached and humidity is 100%

- (d) partial pressure of water vapour is equal to total pressure
- 36. At 100% relative humidity, the wet bulb temperature is [IES-1995]
- (a) more than dew point temperature (b) same as dew point temperature
- (c) less than dew point temperature (d) equal to ambient temperature.
- 37. In a saturated air-water vapour mixture, the [IES-1993]
- (a) dry bulb temperature is higher than the wet bulb temperature
- (b) dew point temperature is lower than the wet bulb temperature
- (c) dry bulb, wet bulb and dew point temperatures are the same
- (d) dry bulb temperature is higher than the dew point temperature
- 38. During adiabatic saturation process of air, wet bulb temperature [IES-1999]
- (a) increases and dry bulb temperature remains constant
- (b) remains constant and dry bulb temperature increases
- (c) remains constant and dry bulb temperature decreases
- (d) decreases and dry bulb temperature remains constant
- 39. During the adiabatic cooling of moist air [IES-1996]
- (a) DBT remains constant (b) specific humidity remains constant.

UNIT-6 Air Conditioning

- 1. Dew point temperature of air at one atmospheric pressure (1.013 bar) is 18oC. The air dry bulb temperature, is 30oC. The saturation pressure of water at 18oC and 30oC are 0.02062 bar and 0.04241 bar respectively. The specific heat of air and water vapour respectively are 1.005 and 1.88 kJ/kg K
- and the latent heat of vaporization of water at 0oC is 2500 kJ/kg. The specific humidity and enthalpy (kJ/kg of dry air) of this moist air respectively, are [GATE 2004]
 - (b) 0.01051, 52.64 (b) 0.01291, 63.15 (c) 0.01481, 78.60 (d) 0.01532, 81.40
- 2.A moist air sample has dry bulb temperature of 30°C and specific humidity of 11.5 g water vapour per kg dry air. Assume molecular weight of air as 28.93. If the saturation vapour pressure of water at 30°C is 4.24 kPa and the total pressure is 90 kPa, then the relative humidity (in %) of air sample is
 - (a) 50.5 (b) 38.5 (c) 56.5 (d) 68.5 [GATE-2010]
- 3. For a typical sample of ambient air (at 35 °C, 75% relative humidity and standard atmospheric pressure), the amount of moisture in kg per kg of dry air will be approximately [GATE-2005] (a) 0.002 (b) 0.027 (c) 0.25 (d) 0.75
- 4. For air at a given temperature, as the relative humidity is increased isothermally, [GATE-2001]
- (a) the wet bulb temperature and specific enthalpy increase
- (b) the wet bulb temperature and specific enthalpy decrease
- (c) the wet bulb temperature increases and specific enthalpy decreases
 - (d) the wet bulb temperature decreases and specific enthalpy increases
- 5. Dew point temperature is the temperature at which condensation begins when the air is cooled at constant [GATE-2006]
 - (b) volume (b) entropy (c) pressure (d) enthalpy
- 6. For air with a relative humidity of 80% [GATE-2003]
- (a) the dry bulb temperature is less than the wet bulb temperature
- (b) the dew point temperature is less than wet bulb temperature
- (c) the dew point and wet bulb temperatures are equal
- (d) the dry bulb and dew point temperatures are equal
- 7. The statements concern Psychrometric chart. [GATE-2006]
- 1. Constant relative humidity lines are uphill straight lines to the right
- 2. Constant wet bulb temperature lines are downhill straight lines to the right
- 3. Constant specific volume lines are downhill straight lines to the right
- 4. Constant enthalpy lines are coincident with constant wet bulb temperature lines Which of the statements are correct?
 - (b) 2 and 3 (b) 1 and 2 (c) 1 and 3 (d) 2 and 4
- 8. When atmospheric air is heated at constant pressure, then which one is not correct. [GATE-2000]
- (a) humidity ratio does not change (b) relative humidity increases

- (c) dew point temperature does not change (d) wet bulb temperature increases
- 9. During chemical dehumidification process of air [GATE-2004]
- (a) dry bulb temperature and specific humidity decrease
- (b) dry bulb temperature increases and specific humidity decreases
- (c) dry bulb temperature decreases and specific humidity increases
 - (d) dry bulb temperature and specific humidity increase
- 10. Water at 42°C is sprayed into a stream of air at atmospheric pressure, dry bulb temperature of 40oC and a wet bulb temperature of 20oC. The air leaving the spray humidifier is not saturated. Which of the following statements is true? [GATE-2005]
- (a) Air gets cooled and humidified (b) air gets heated and humidified
 - (c) Air gets heated and dehumidified (d) Air gets cooled and dehumidified
- 11. For the following "Matching" exercise, choose the correct one from among the alternatives [GATE-2000]

A, B, C and D

Group 1 Group 2 (A) Two stroke engine

- 1. Marine Diesel Engine (B) Four stroke engine
- 2. Air conditioning 3. Steam Power Plant
- (C) Rotary engine
- 4. Gas Turbine Power Plant (D) Cooling and dehumidification
 - (E) Cooling tower
 - (F) Brayton cycle
 - (G) Rankine cycle
 - (H) D slide valve

(a)	(b)	(c)	(d)
1-B	1-C	1-A	1-A
2-E	2-F	2-F	2-D
3-F	3-E	3-G	3-G
4-H	4-G	4-E	4-F

- 12. Air (at atmospheric pressure) at a dry bulb temperature of 40°C and wet bulb temperature of 20°C is humidified in an air washer operating with continuous water recirculation. The wet bulb depression (i.e. the difference between the dry and wet bulb temperatures) at the exit is 25% of that at the inlet. The dry bulb temperature at the exit of the air washer is closest to (A) 10^{0} C (B) 20^{0} C (C) 25^{0} C (D) 30^{0} C [GATE-2008]
- 13. Moist air at a pressure of 100 kPa is compressed to 500 kPa and then cooled to 350C in an after cooler. The air at the entry to the after cooler is unsaturated and becomes just saturated at the exit of the after cooler. The saturation pressure of water at 35°C is 5.628 kPa. The partial pressure of water vapour (in kPa) in the moist air entering the compressor is closest to [GATE-2008]

(B) 0.57 (B) 1.13 (C) 2.26 (D) 4.5

- 14. The statements concern Psychrometric chart. [GATE-2006]
- 1. Constant relative humidity lines are uphill straight lines to the right
- 2. Constant wet bulb temperature lines are downhill straight lines to the right
- 3. Constant specific volume lines are downhill straight lines to the right
- 4. Constant enthalpy lines are coincident with constant wet bulb temperature lines Which of the statements are correct?
 - (b) 2 and 3 (b) 1 and 2 (c) 1 and 3 (d) 2 and 4
- 15. Consider the following statements: [IES-1997]

1. wet bulb temperature A psychrometer measures

2. dew point temperature

3. dry bulb temperature.

On these statements

- (a) 1 alone is correct (b) 2 and 3 are correct (c) 1 and 3 are correct (d) 1, 2 and 3 are correct
- 16. If the specific heats of dry air and water vapour are 1.00 kJ/kg-K and 1.88 kJ/kg-K respectively and the humidity ratio is 0.011, then the specific heat of moist air at 25°C and 50% relative humidity will be [IES-1994]
- (a) 1.0207 kJ/kg-K (b) 1.869 kJ/kg-K
- (c) 1.891 kJ/kg-K
- (d) 0.9793 kJ/kg-K

17. If Pa and Pv denote respectively the partial pressure of dry air and that of water vapour in moist					
air, the specific humidity of	air is given by	•	•

(a) 2 1 3 4

(c) 2 4 3 1

- 30. Consider the following statements: [IES-2004]
- 1. The specific humidity is the ratio of the mass of water vapour to the mass of dry air in a given volume of the mixture
- 2. The relative humidity of the atmospheric air is the ratio of the actual mass of the water vapour in a given volume to that which it would have if it were saturated at the same temperature
- 3. The degree of saturation is defined as the ratio of the specific humidity of a mixture to the specific humidity of the mixture when saturated at the same temperature

Which of the statements given above are correct?

- (d) 1, 2 and 3 (a) 1 and 2 (b) 2 and 3 (c) 1 and 3
- 31. In a cooling tower the sum of range and approach is equal to twice the wet bulb depression. Then [IES-2003]
- (a) Dry bulb temperature is mean of water inlet temperature and wet bulb temperature
- (b) Dry bulb temperature is mean of water outlet temperature and wet bulb temperature
- (c) Water inlet temperature is mean of dry bulb temperature and wet bulb temperature
- (d) Water inlet temperature is mean of water outlet temperature and wet bulb temperature
- 32. In case A, moist air is adiabatically saturated and in case B, moist air is isobarically saturated.

The saturation temperatures in cases A and B are respectively [IES-2002]

- (a) dry bulb temperature and wet bulb temperature
- (b) dew point temperature and wet bulb temperature
- (c) wet bulb temperature and dew point temperature
- (d) wet bulb temperature and dry bulb temperature
- 33. When the wet bulb and dry bulb temperatures are equal, which of the following statements is/are correct? [IES-2005]
- 1. Air is fully saturated.2. Dew point temperature is reached.
- 3. Partial pressure of vapour equals to the total pressure.4. Humidity ratio is 100%.
- (a) 1 and 2 (b) 1 only (c) 1, 2 and 4 (d) 2 and 3
- 34. When the wet and dry bulb temperatures are identical, which of the following statements is/are true? [IES-2001; 2003]
- 1. Air is fully saturated
- 2. Dew point temperature is reached
- 3. Humidity ratio is unity
 - 4. A Partial pressure of vapour equals total pressure

Select the correct answer from the codes given below:

- (b) 1 only (b) 1 and 2 (c) 3 and 4 (d) 1, 2, 3 and 4
- 35. When dry-bulb and wet-bulb temperatures are identical, it means that the
- (a) air is fully saturated and dew-point temperature has reached [IES-2000]
- (b) air is fully saturated
- (c) dew-point temperature has reached and humidity is 100%
- (d) partial pressure of water vapour is equal to total pressure
- 36. At 100% relative humidity, the wet bulb temperature is [IES-1995]
- (a) more than dew point temperature (b) same as dew point temperature
- (c) less than dew point temperature (d) equal to ambient temperature.
- 37. In a saturated air-water vapour mixture, the [IES-1993]
- (a) dry bulb temperature is higher than the wet bulb temperature
- (b) dew point temperature is lower than the wet bulb temperature
- (c) dry bulb, wet bulb and dew point temperatures are the same
- (d) dry bulb temperature is higher than the dew point temperature
- 38. During adiabatic saturation process of air, wet bulb temperature [IES-1999]
- (a) increases and dry bulb temperature remains constant
- (b) remains constant and dry bulb temperature increases
- (c) remains constant and dry bulb temperature decreases
- (d) decreases and dry bulb temperature remains constant
- 39. During the adiabatic cooling of moist air [IES-1996]
- (a) DBT remains constant (b) specific humidity remains constant.
- (c) relative humidity remains constant (d) WBT remains constant.
- 1. Which of the following properties decrease(s) with sensible heating of airwater vapour mixture? [IES-2008]
- 1. Relative humidity 2. Humidity ratio 3. Specific enthalpy of air-vapour mixture

4. Wet bulb temperature

Select the correct answer using the code given below:

- (a) 1 only
- (b) 1 and 3
- (c) 2 and 3
- (d) 2 and 4
- 2. Moist air is a mixture of dry air and water vapour. Hence three independent intrinsic thermodynamic properties are required to fix its thermodynamic state. While using Psychrometric chart, however, only two thermodynamic properties are needed since, Psychrometric chart [IES-1993]
- (a) is an approximation to actual properties
- (b) assumes that both water vapour and dry air behave like perfect gases
- (c) is drawn for actual properties of water vapour and dry air
- (d) is drawn for a fixed pressure
- 3. To fix the state point in respect of air-vapour mixtures, three intrinsic properties are needed. Yet, the Psychrometric chart requires only two because [IES-1998]
- (a) water vapour is in the superheated state
- (b) the chart is for a given pressure
- (c) the chart is an approximation to true values
- (d) the mixtures can be treated as a perfect gas
- 4. Which one of the following is correct? [IES-2008]

On Psychrometric chart, the constant wet bulb temperature lines coincide with.

- (a) constant relative humidity lines
- (b) constant enthalpy lines
- (c) constant dew point temperature lines
- (d) constant volume lines
- 5. Which of the following properties increasers) during sensible heating of airwater vapour-mixture? [IES-2003]
- 1. Relative humidity 2. Humidity ratio 3. Wet bulb temperature 4. Specific enthalpy of air-vapour mixture

Select the correct answer from the codes given below:

- (a) 1 and 2 (b) 3 only (c) 2 and 3 (d) 3 and 4
- 6.Atmospheric air at 35°C and 60% RH can be brought to 20°C and 60% RH by:
- (a) Cooling and dehumidification process
- (b) Cooling and humidification process
- (c) Adiabatic saturation process
- (d) Sensible cooling process
- 7. Consider the following statements: [IES-1995]

In psychrometry, wet-bulb temperature is a measure of enthalpy of moist air, so that in the Psychrometric chart,

- 1. the constant enthalpy lines are also constant wet bulb temperature lines
- 2. the wet bulb and dry bulb temperature are same at any condition
- 3. the wet bulb and dry-bulb temperature are equal at saturation condition.

Of these statements.

- (a) 1 alone is correct (b) 1 and 2 are correct
- (c) 1 and 3 are correct (d) 2 and 3 are correct.
- 8. Which one of the following statements is correct? [IES-1994]
- (a) Pressure and temperature are independent during phase change.
- (b) An isothermal line is also a constant pressure line in the wet vapour region.
- (c) Entropy decreases during evaporation.
- (d) The term dryness fraction is used to specify the fraction by mass of liquid in a mixture of liquid and vapour.
- 9. In a psychrometric chart, what does a vertical downward line represent?
- (a) Sensible cooling process (b) Adiabatic saturation process
- (c) Humidification process (d) Dehumidification process [IES-2009]
- 10. Consider the following statements: [IES-1994]

During sensible heating

1. moisture content increases 2. dry bulb temperature and wet bulb temperature increase

3. dew point remains constant 4. relative humidity increases

Select the correct answer using the codes given below:

- (a) 1, 2 and 3 (b) 2,3 and 4 (c) 2 and 3 (d) 1 and 2
- 11. Consider the following statements regarding Psychrometric processes:
- 1. Sensible heating is a process in which moisture content remains unchanged.
- 2. In the dehumidification process the dew point temperature remains same.
- 3. The process of adding moisture at constant dry bulb temperature is known as pure humidification process.

Which of the statements given above is/are correct? [IES-2008]

- (a) 1 and 2 (b) 1 and 3 (c) 2 and 3 (d) 1 only
- 12. Which one of the following is correct? [IES-2008]In a sensible heating or cooling process
- (a) dry bulb temperature remains constant (b) wet bulb temperature remains constant
- (c) the humidity ratio remains constant
- (d) the relative humidity remains constant
- 13. For air-conditioning the operation theatre in a hospital, the percentage of outside air in the air supplied is [IAS-1995]
 - (a) zero (b) 20 (c) 50 (d) 100
- 14. Which of the following items related to infiltration of outdoor air in an airconditioning system, are correctly matched? [IAS-2007]
- 1. Stack effect: Height of building 2. Crack length method: Wind velocity
- 3. Air change method : Floor area
- 4. Door opening: Occupancy in kitchen

Select the correct answer using the code given below:

- (a) 1 and 2 (b) 1 and 3 (c) 1 and 4 (d) 2 and 4
- 15. A room air is at a DBT of Tr and relative humidity ϕ_r . The effective temperature of the room is [IAS 1994]
- (a) the temperature at which the room air is saturated but gives the same feeling of comfort as the actual state of the room air
- (b) the temperature at which the room air is at 50% relative humidity but gives the same feeling of comfort as the actual state of the room air
- (c) the temperature at which the room air is completely dry but gives the same feeling of comfort as the actual state of the room air.
- (d) none of the above.
- 16. Consider the following statements: [IAS-1996] Effective temperature
- 1. Is a measure of the sensation of warmth or coldness.
- 2. Is the uniform temperature of an imaginary enclosure with which man will exchange the same dry heat by radiation and connection as in the actual environment.
- 3. Combines the effects of dry bulb temperature, wet bulb temperature and air movement.

Of these statements:

- (a) 1 and 2 are correct (b) 1 and 2 are correct
- (c) 2 and 3 are correct (d)1 and 3 are correct
- 17. Which one of the following statements is true for effective temperature, ET? [IAS-2004]
- (a) ET increases with increase in level of activity and it decreases with increase in air velocity
- (b) ET decreases with increase in level of activity and it increases with increase in air velocity.
- (c) ET increases with increase in level of activity and it increases with increase in air velocity
- (d) ET decreases with increase in level of activity and decreases with increase in air velocity.
- 18. Consider the following statements: [IAS-1999]

Effective temperature is NOT a true comfort index because

- L discomfort may be experienced at extremely high or low humilities.
- 2, the radiation effect of surrounding surfaces has not been taken into account.
- 3. it presumes the absence of drafts. Of these statements:
- (a) 1, 2 and 3 are correct (b) 1 and 2 are correct (c) 1 and 3 are correct (d) 2 and 3 are correct
- 19. In room air-conditioning for comfort, the supply air in summer should be at [IAS-1997]
- (a) the same temperature as that of the room (b) 5 to 10° C below the room temperature
- (c) 2 to 30C above the room temperature (d) at 0° C

- 20. The difference between the comfort air conditioning and industrial air conditioning lies in the [IAS-1998]
- (a) equipment used (b) process adopted
- (c) indoor requirements (d) ambient conditions.
- 21. Instantaneous cooling loads are NOT equal to instantaneous heat gains because [IES-2003]
- (a) Heat gains are offset by cooling provided by the AC system (b) Indoor temperatures are lower
- (c) Comfort conditions are maintained in the space
- (d) Of the storage effect in the construction material of walls and roof
- 22. Assertion (A): In an air-conditioned room, the reflective coating should be on the inside of the window.

Reason (R): plane Window glass is transparent to solar radiation. [IES-1996]

- (a) Both A and R are individually true and R is the correct explanation of A
- (b) Both A and R are individually true but R is not the correct explanation of A
- (c) A is true but R is false
- (d) A is false but R is true
- 23. On which of the following factors does sol-air temperature depend? [IES-2003]
- 1. Outdoor air temperature 2. Intensity of solar radiation3. Absorptivity of wall
- 4. Convective heat transfer coefficient at outer surface of wall 5. Indoor design temperature Choose the correct answer from the codes given below:
 - (a) 1, 2 and 5 (b) 1, 2 and 3 (c) 3 and 4 (d) 1, 2, 3 and 4
- 24. Consider the following factors: [IES-1994]
- 1. Wind velocity 2. Type of activity 3. Indoor design conditions 4. Door openings Occupancy load in cooling load calculations depends upon
 - (a) 1 and 2 (b) 1 and 3 (c) 1 and 4 (d) 2 and 3.
- 25. In air-conditioning design for summer months, the condition inside a factory where heavy work in performed as compared to a factory in which light work is performed should have [IES-1998]
 - (a) lower dry bulb temperature and lower relative humidity
 - (b) lower dry bulb temperature and higher relative humidity
 - (c) lower dry bulb temperature and same relative humidity
 - (d) same dry bulb temperature and same relative humidity
- 26. Two summer air-conditioning systems with non-zero by pass factor are proposed for a room with a known sensible and latent heat load. System A operates with ventilation but system B operates without ventilation. Then the [IES-1995]
 - a) bypass factor of system A must be less than the bypass factor of system B
 - (b) bypass factor of system A must be more than the bypass factor of system B
 - (c) apparatus dew point for system A must be lower than the apparatus dew point for system B
 - (d) apparatus dew point for system A must be higher than the apparatus dew point for system B.
