<b>4.</b>	<b>a).</b>	Write a precis for the following passage.	4	K6	<b>7</b>

		<p>Most of us use the products of science – railways, aeroplanes, electricity, wireless and thousands of others – without thinking how they came into existence. We take them for granted, as if we were entitled to them as a matter of right. We are very proud of the fact that we live in an advanced age and are ourselves very advanced. Now, there is no doubt that our age is very different from previous ages and I think it is perfectly correct to say that it is far more advanced. But it is a different thing from saying that we, as individuals or groups, are more advanced. It would be the height of absurdity to say that because an engine driver can run an engine and Plato or Socrates could not, the engine driver is more advanced than, or is superior to, Plato or Socrates. But it would be perfectly correct to say that the engine itself is a more advanced method of locomotion than Plato's chariot was.</p>

<b>8.</b>	<b>a).</b>	<p>Read the following passage and answer the questions that follow:            Liquids are practically incompressible. Unlike gases but like solids, a liquid does not change much in volume when the pressure on it is changed, even when the pressures of thousands of atmospheres are involved. The kinetic theory accounts for this saying that the amount of free space between the molecules of a liquid has been reduced almost to a minimum. Any attempt to compress the liquid meets with resistance as the electron cloud of one molecule repels the electron cloud of the adjacent molecule.</p>	2	K2	<b>8</b>

		<p>Liquids diffuse slowly, but in gases it is more rapid. It occurs because molecules have kinetic energy and move from one place to another. In a liquid, molecules do not move very far before they collide with neighboring molecules.</p> <p>i) What is the nature of the liquids?          ii) What does kinetic theory say about the incompressible nature of liquids?          iii) What are the different kinds of matter?          iv) Give the meaning for 'diffusion'?          v) Why is diffusion more rapid in gases?          vi) Give the antonym for 'kinetic'?          vii) Mention a suitable title.</p>
