## Roll No.

EX - 501
B.E. V Semester

Examination, December 2014

## Utilization of Electrical Energy

## Time: Three hours

## Maximum Marks : 70

Note: i) Answer five questions. In each question part $\mathrm{A}, \mathrm{B}, \mathrm{C}$ is compulsory and D part has internal choice.
ii) All parts of each question are to be attempted at one place.
iii) All questions carry equal marks, out of which part A and B (Max. 50 words) carry 2 marks, part C (Max. 100 words) carry 3 marks, part D (Max. 400 words) carry 7 marks.
iv) Except numericals, Derivation, Design and Drawing etc.

## Unit I

1. a) Explain solid angle.
b) What is glare. Explain in brief.
c) State the law of illumination.
d) Explain the working of fluorescent tube with the help of circuit diagram giving the function of various parts.

## OR

Two lamp posts are 16 in apart and are fitted with a 100 cp lamp each at a height of 6 m above the ground. Calculate the illumination on the ground under each lamp and midway between the lamps.

## Unit II

2. a) What are the advantage of electric heating.
b) What is the fundamental difference hetween electric arc welding and resistance welding.
c) What is electrolysis. Explain briefly.
d) What is dielectric heating. Explain the factor on which the dielectric loss in a dielectric materials depends.

## OR

Explain with the help of a neat sketch diagram the working of Ajax Wyatt furnace. What is its field of application.

## Unit III

3. a) What do you mean by "electric traction".
b) What do you understand by speed time curves.
c) What do you mean by breaking! Explain with example.
d) A train is required to run between two stations 1.5 km apart at a schedule speed of $36 \mathrm{~km} / \mathrm{h}$. The duration of stops being 25 seconds. The braking retardation is $3 \mathrm{~km} / \mathrm{h} / \mathrm{s}$. Assuming a trapezoidal speed time curve. Calculate the acceleration if the ratio of maximum speed to average speed is to be 125 .

## OR

Explain the terms:
i) Adhesive weight ii) Train resistance Unit IV
4. a) What do you mean by electrical drives.
b) Write the difference between group drive and individual drive.
c) Explain air conditioning in brief.
d) What do you mean by load equalization explain with example. OR
Explain regenerative braking with neat sketch circuit diagram.

## Unit V

5. a) What do you mean by electrical vehicles.
b) What is tractive effort. Explain in brief
c) Write the characteristics of traction motor.
d) What do you mean hev norfnrmance of vehicles. Explain in detail.

Write short notes on:
i) Energy consumption
ii) Configuration of electrical vehicles.
